Documentation Use the OpenStack APIs to launch server instances, create images, assign metadata to instances and images, create storage containers and objects, and complete other actions in your OpenStack cloud. OpenStack Docs: OpenStack API Documentation The API working group has API documentation guidelines that all teams providing a REST API service in OpenStack strive to follow. This document tells you what and how much to write. If you follow the suggested outline, your API guide will be accurate and complete. OpenStack Docs: OpenStack API documentation OpenStack APIs¶ To authenticate access to OpenStack services, you must first issue an authentication request with a payload of credentials to OpenStack Identity to get an authentication token. Credentials are usually a combination of your user name and password, and optionally, the name or ID of the project of your cloud. OpenStack Docs: OpenStack APIs Please refer to <http://docs.openstack.org/contributor-guide/api-guides.html> for information about API documentation. Documentation/API - OpenStack OpenStack Train API Reference Documentation This page contains documentation about the OpenStack API and how to use it. OpenStack Docs: Train API references The focus here is the creation, maintenance and organization of the OpenStack documentation found at the <http://docs.openstack.org> site. While the Docs team helps create a good framework, it's the entire OpenStack community -- and especially contributors like you -- that provides the expert content and corrections for the documentation. Documentation - OpenStack Except where otherwise noted, this document is licensed under Creative Commons Attribution 3.0 License. See all OpenStack Legal Documents. OpenStack Docs: Welcome to keystone's documentation! Block Storage API¶. Contents: API content can be searched using the Search Page.. Details for each microversion change can be found in the REST API Version History documentation. OpenStack Docs: Block Storage API Introduction¶. Ironic is an OpenStack project which provisions bare metal (as opposed to virtual) machines. It may be used independently or as part of an OpenStack Cloud, and integrates with the OpenStack Identity (keystone), Compute (nova), Network (neutron), Image (glance), and Object (swift) services. OpenStack Docs: Welcome to Ironic's documentation! OpenStack API Documentation User Guides End User Guides Create and

manage resources using the OpenStack dashboard, command-line client, and Python SDK Open source software for application development Resources for application development on OpenStack clouds Project-specific Guides ... OpenStack Docs: Train A software development kit (SDK) contains code, examples, and documentation that you use to create OpenStack cloud applications in the language of your choice. If one of the following SDKs do not support your language or use case, you can use the APIs or one of the other known SDKs. OpenStack Docs: Application Development API ¶¶¶¶¶¶¶¶¶¶. With the TryStack OpenStack installation, these services work together in the background of the installation, and many of these examples work on TryStack.. These DocBook guides should be aimed at deployers of OpenStack clouds. They should probably cover installation for at least one production-ready configuration of Barbican. Barbican/Documentation - OpenStack API reference information enables Software Development Kit (SDK) developers to create code, examples, and documentation that you use to create OpenStack cloud applications in the language of your choice. openstack API update Heat provides both an OpenStack-native ReST API and a CloudFormation-compatible Query API. Heat also provides an autoscaling service that integrates with the OpenStack Telemetry services, so you can include a scaling group as a resource in a template. Open Source Cloud Computing Platform Software - OpenStack Zun provides an OpenStack API for launching and managing containers backed by different container technologies. Different from Magnum, Zun is for users who want to treat containers as OpenStack-managed resource. Containers managed by Zun are supposed to be integrated well with other OpenStack resources, such as Neutron network and Cinder volume. Open Source Cloud Computing Platform Software - OpenStack About this project Keystone is an OpenStack service that provides API client authentication, service discovery, and distributed multi-

tenant authorization by implementing OpenStack’s Identity API. It supports LDAP, OAuth, OpenID Connect, SAML and SQL.
