Law and the Internet The New Legal Framework for E-commerce in Europe This collection of essays by well known specialists in e-commerce and Internet law, drawn from both academe and practice, analyses recent crucial legislation which has created, for the first time, a legal regime governing European electronic commerce. The New Legal Framework for E-Commerce in Europe The focus of this book is the regulatory framework of the internet and e-commerce. It considers how the law has developed in the context of rapid technological change and analyses how it is being applied to define rights and obligations in relation to the online infrastructure, content and practices. *Preventive Detention of Terror Suspects* Edward Elgar Publishing

For the last twenty years the European Union has been extremely active in the field of e-commerce. This important new book addresses the key pieces of EU legislation in the field of e-commerce, including the E-commerce Directive, the Services Directive, the Consumer Directive, the General Data Protection Regulation, and the eID Regulation. The latest in the Elgar Commentaries series, EU Regulation of E-Commerce is the first book to apply this well-established format to a dynamic and increasingly significant area of law.

A New Legal Framework Towards a Definitive EU VAT System : Online Hosting Platforms and E-books Reveal Unsolved Problems on the Horizon Hart Publishing

Legal Framework for e-Research: Realising the Potential provides an overview of key legal issues facing e-Research. Part One of this book considers the broader prospect and context of what e-Research will allow. Part Two looks more closely at the role law will play in the e-Research environment. Part Three focuses on the key issues of data exchange and data management highlighting important legal issues. Part Four reflects on the changing nature of Scholarly Communications while Part Five looks at the fundamental role of agreements for collaborative endeavour (contracts) in structuring collaboration and calls for greater consideration of way we can streamline the process. Part Six examines the role and operation of privacy law in an e-Research world while Part Seven posits a new approach to commercialisation that embraces the paradigm of open innovation. Part Eight looks at the international legal implications for e-Research and Part Nine considers the national survey we undertook on e-Research, collaborative agreements and data management.

Frameworks for ICT Policy: Government, Social and Legal Issues Springer

Artificial intelligence (AI) involves opportunities as well as risks; human rights should be strengthened by AI, not undermined. This Recommendation on AI and human rights provides guidance on the way in which the negative impact of AI systems on human rights can be prevented or mitigated, focusing on 10 key areas of action.

Internet Commerce 2004 Bloomsbury Publishing

The Internet is changing how we communicate with each other, how we gather information, how we form communities, and, more and more, how we engage in commercial transactions. This casebook addresses the last of these transformations: it addresses the law of electronic commerce. It puts together everything needed to teach a course in e-commerce. It addresses all of the important legal issues that arise in conducting business via the Internet - beginning with registration of a domain name, and including contracting, protecting intellectual property, complying with government regulations, and resolving disputes. It is besupplemented with a website that contains online materials referenced in the book, as well as updates reflecting important developments in the law of e-commerce.

Legal Issues of Mobile Apps IGI Global

Intermediate Examination Paper from the year 2010 in the subject Law - Comparative Legal Systems, Comparative Law, grade: befriedigend, Queen Mary University of London (Centre for

Commercial Law Studies (CCLS)), course: International Studies in Intellectual Property Law (LL.M.) - End of first term dissertation, language: English, abstract: Rapidly developing technologies are providing new and very powerful means to sort, combine and analyse data. This data exists in a networked environment, thus personal information can be collected and processed on any computer on the Net and is, at least in theory, accessible by every computer on the Net. The development of the Internet has made it possible to transfer this data "around the globe at the click of a mouse". Fresh business models such as "cloud computing", the newest "driver to illustrate the speed and breadth of the environment", allow this data to be processed across national borders on a routine basis. Individuals and companies are "increasingly immersed in social networking, search technologies, online commerce and many other activities in which information about an individual is sent worldwide from one point to another". These activities became more and more borderless, because the Internet, as an open window to the world, blurs the lines between public and private space, firstly since globalisation and the outsourcing of economic actors entrain an ever growing exchange of personal data, additionally because of the security pressure in the name of the legitimate fight against terrorism opens the access to a significant number of data to an increasing number of public authorities and finally this is due the tools of the digital society accompany everyone at each stage of life by leaving permanently individual and borderless traces in both space and time. Therefore, calls of both the public and private sectors for an international legal framework for privacy and data protection have become louder. Privacy Com

Unboxing Artificial Intelligence: 10 steps to protect human rights Springer Nature

What are the rules of international water law that govern the use of the transboundary aquifers shared by Palestine and Israel? This book addresses this issue through an interdisciplinary approach, identifying first the special problems tied to the management of shared groundwater, and next critically analysing the applicable rules of international law. The innovative contribution of this work is its attempt to devise and suggest the means to implement a "progressive framework" for cooperation in the development and management of these shared waters. A solid review of hydro-politics, supported by current up to date information and rigorous examination of the evolution of the relevant rules of international law makes this book an important contribution to this very problematic area. Dr Fadia Diabes-Murad was awarded the Edberg Award 2005, presented at a special awards ceremony in Stockholm. The award recognised her contribution to peace in the Middle East through her work on water law, including using water as a catalyst for peace in the Middle East.

Edinburgh University Press

Legal Programming: Designing Legally Compliant RFID and Software Agent Architectures for Retail Processes and Beyond provides a process-oriented discussion of the legal concerns presented by agent-based technologies, processes and programming. It offers a general outline of the potential legal difficulties that could arise in relation to them, focusing on the programming of negotiation and contracting processes in a privacy, consumer and commercial context. The authors will elucidate how it is possible to create form of legal framework and design methodology for transaction agents, applicable in any environment and not just in a specific proprietary framework, that provides the right level of compliance and trust. Key elements considered include the design and programming of legally compliant methods, the determination of rights in respect of objects and variables, and ontologies and programming frameworks for agent interactions. Examples are used to illustrate the points made and provide a practical perspective.

Internet Contract Making in Russia Kluwer Law International B.V.

This is the third edition of a successful book which offers students and practitioners an up-to-date overview of developments in Internet law and practice. The editors have once again assembled a team of specialist authors to write about those aspects of Internet law which are of special importance in the global regulation of the Internet and focussed around three principal themes- e-

commerce, intellectual property, and privacy, data protection and cyber-crime with, in addition a major contribution on Internet Governance. This edition incorporates for the first time areas such as data protection, privacy and electronic surveillance, cyber crime and cyber security, jurisdiction and dispute resolution online. The section on IP contains clear and comprehensive analysis of the many and varied ways in which IP and the internet intersect including open source licenses and the IP problems around search engines. The new edition also takes account of all current cases and legislation, including the draft revised EC Telecoms Package and the Audio Visual Media Services Directive. This book will be essential reading for students, teachers and practitioners interested in Internet law and practice as well as technologists and social scientists. 'The book is easy to read, and...has been well edited...and flows smoothly through the various topics. ...the book provides a worthwhile overview of this developing area of law throughout the world.' Peter Walsh, International Trade Law Annual 'a thorough and stimulating survey. ...a good introduction for lawyers and students approaching Internet and e-commerce law for the first time, and a useful course text.' Brian Hutchinson, The Irish Jurist

Legal Programming Martinus Nijhoff Publishers

The generation and use of data in society has seen exponential growth in recent years. The emergent field of data science, concerned with understanding and analyzing this data, can be applied to applications spanning from healthcare and urban planning to smart household devices. The legal questions which accompany the rise of these technologies, however, remains underexplored. Breaking new ground this Research Handbook maps the legal implications of the emergence of data science. Drawing on comparative perspectives, this Research Handbook approaches the subject from different legal domains, considering the possibilities and limitations of the current legal framework. Reflecting on whether further regulation is needed to address the ethical and legal problems raised by data science, the contributors examine how the practice is, and should be, regulated and how it influences the law, judiciary, and legal research. The book makes a vital contribution to the emerging field of data science and law as a discipline, and covers data science methodologies and tools essential for both legal practice and scholarship. The Research Handbook in Data Science and Law will be an important resource for students interested in data and technology law, as well as for legal scholars and practitioners in the field. Data scientists seeking an introduction to the law surrounding the field will also find this Research Handbook invaluable.

A New Legal Framework for Managing the World's Shared Groundwaters Council of Europe

In less than ten years touchscreen smartphones and their apps have created an unprecedented technological revolution. Yet they are rife with serious potential for breaches of privacy and security, and a lack of uniform rules makes navigation of the legal landscape extremely difficult. Addressing this unstable regulatory environment, this concise, practical guide for the first time provides a measure of legal certainty. It examines case law and legislation in Europe and the United States to highlight the rights and obligations of all actors involved in the marketing of mobile apps, bring to light essential principles and recommend some viable solutions. Nine experts, all versed in the latest developments in international and national laws and regulations affecting digital mobile technology, examine such key topics as the following: contract law as applied to the sale and use of smartphone apps; intellectual property rights in mobile apps; protection of users; data protection; European Union (EU) medical device legislation and its safety implications for app users; fitness or wellness apps; apps' collection of personal data; apps as hostile code and malware delivery mechanisms; competition law issues; taxation of mobile apps; liability issues for app developers and distributors; and implications of the EU's new regulatory framework on online platforms. Because it is difficult for a basic user to understand how vulnerable everyday apps can be, and because every new information technology platform delivers new risks along with its benefits, legal practitioners working in a wide variety of fields will be increasingly called upon to engage with both personal and enterprise security and privacy breach cases arising from the use of mobile apps. This deeply informed practical analysis goes a long way toward ensuring appropriate handling of legal issues which arise in the mobile app context. Every practitioner, government official and software developer will welcome this much-needed volume.

The Legal Framework for Security in E-commerce: a Comparison of Legislation in the United Kingdom and Malaysia Edward Elgar Publishing

This collection of essays by well known specialists in e-commerce and Internet law, drawn from both academe and practice, analyses recent crucial legislation which has created, for the first time, a legal regime governing European electronic commerce.

EU Management of Global Emergencies National Academies Press

The material and discussions in this law school casebook assume familiarity with the first year legal courses, but not beyond. Subjects covered include online contracts, digital signatures, privacy, liability of Internet service providers and other intermediaries, electronic payment systems, and taxation issues. Because understanding the legal issues frequently depends on understanding the technology underlying Internet communications, glossaries for help with technical terms are provided.

Online Resolution of E-commerce Disputes Routledge

Frameworks for ICT Policy: Government, Social and Legal Issues is a reference on ICT policy framework and a guide to those who are involved in ICT policy formulation, implementation, adoption, monitoring, evaluation and application. This comprehensive publication provides background information for scholars and researchers who are interested in carrying out research on ICT policies and promotes the understanding of policies guiding technology.

Law and the Internet Cambridge University Press

This article explores the most recent EU proposals approved regarding definitive VAT system designed for digital economy. The authors present a comprehensive overview of the actual policy trends in the field of VAT and digital economy, in order to identify the main features of the system as

conceived by the Commission to respond to the current challenges posed by technological innovation. To demonstrate missing elements of the system and further stimulate debate, the authors take the example of online hosting platforms and ebooks, and use these technological innovations to identify the weaknesses of the system. Finally, the authors propose some conceptual solutions, also in light of recent innovations.

Internet and E-commerce Law Springer

Preventive detention as a counter-terrorism tool is fraught with conceptual and procedural problems and risks of misuse, excess and abuse. Many have debated the inadequacies of the current legal frameworks for detention, and the need for finding the most appropriate legal model to govern detention of terror suspects that might serve as a global paradigm. This book offers a comprehensive and critical analysis of the detention of terror suspects under domestic criminal law, the law of armed conflict and international human rights law. The book looks comparatively at the law in a number of key jurisdictions including the USA, the UK, Israel, France, India, Australia and Canada and in turn compares this to preventive detention under the law of armed conflict and various human rights treaties. The book demonstrates that the procedures governing the use of preventive detention are deficient in each framework and that these deficiencies often have an adverse and serious impact on the human rights of detainees, thereby delegitimizing the use of preventive detention. Based on her investigation Diane Webber puts forward a new approach to preventive detention, setting out ten key minimum criteria drawn from international human rights principles and best practices from domestic laws. The minimum criteria are designed to cure the current flaws and deficiencies and provide a base line of guidance for the many countries that choose to use preventive detention, in a way that both respects human rights and maintains security.

Optimizing the Nation's Investment in Academic Research IWA Publishing

This book covers areas of the law which are important to the arena of electronic commerce: intellectual property; e-commerce; and content liability.

Implications of the International Legal Framework for E-commerce in Uganda GRIN Verlag

This research, entitled The Evolution of a Regulatory Framework for E-commerce: Metamorphosis of Traditional Contract Principles, is set against the background of the general question whether there is the need for a whole new legal structure for contract formation in the on line environment, or if the existing traditional laws of contract are sufficient by adapting the current provisions to cyber space. In the first chapter, the research examines the context of e-contract, laying a foundation for the analysis of the legal framework through which electronic business transactions are conducted. The research covers matters such as the rudimentary use of the prefix e as an attempt to translate commerce from its traditional form to its cyber-based equivalent. This chapter also explores a description of the technological infrastructure for various avenues of e-commerce. Chapter Two provides a functional definition of the law of e-commerce. From the proposal that the virtual world is completely devoid of law to the view that it is too strictly regulated, this chapter examines whether or not there can be a legal mechanism for governing businesses online - as distinct from the general law of contract - what that mechanism might be, and the efficacy of any such law. In Chapter Three a model of a virtual contract formed by the use of electronic media is examined. This model of contract formation is aided by importing the rules of traditional contract into the virtual shop. The contract rules are tested for relevance and applicability in the online environment. Chapter Four deals with a crucial feature of many online contracts: 'standard forms'. It answers the question whether there is anything significantly different from the day-to-day standard form paper contracts when these contracts are formed and/or executed online. In Chapter Five the concept of a separate legal personality for automated agents is discussed. There is an analogous review of the creation of personality from other non-human v legal persons. Signature and other authenticating means as key to contract formation, though not necessarily ingredients for determining validity, are discussed. In Chapter Six the research explores the relevance and increased use of authentication features like pin numbers, biometrics and e-signatures, particularly the legal aspects of electronic signatures (statutory requirements, practical problems with their use, and case law response to the use of electronic signatures). Finally the work turns to the core issues surrounding complex e-commerce transactions: choosing a forum for the adjudication of disputes. The work, while dealing with keys aspects of contract, moves from the traditional contract form to contracts in the virtual environment, and questions the applicability of the existing law, then proposes an approach specific to the uniqueness of the online market.

Major Legal Trends in the Digital Economy. The Approach of the EU, the US, and China Lawbook Company

How will law, regulation and ethics govern a future of fast-changing technologies? Bringing together cutting-edge authors from academia, legal practice and the technology industry, Future Law explores and leverages the power of human imagination in understanding, critiquing and improving the legal responses to technological change. It focuses on the practical difficulties of applying law, policy and ethical structures to emergent technologies both now and in the future. It covers crucial current issues such as big data ethics, ubiquitous surveillance and the Internet of Things, and disruptive technologies such as autonomous vehicles, DIY genetics and robot agents. By using examples from popular culture such as books, films, TV and Instagram - including 'Black Mirror', 'Disney Princesses', 'Star Wars', 'Doctor Who' and 'Rick and Morty' - it brings hypothetical examples to life. And it asks where law might go next and to regulate new-phase technology such as artificial intelligence, 'smart homes' and automated emotion recognition.
