"Do the Math: On Growth, Greed, and Strategic Thinking is a fresh look at the numbers of daily living, particularly in light of current economic troubles, where modern economic practices, mathematical concepts, and everyday moral dilemmas are discussed. The book is original because it tackles numbers directly to take aim at various unsubstantiated claims and popular misconceptions. The book is made up of a number of topic sections, introducing the reader to everyday mathematical concepts and more reasoned arguments on the value of cooperation" --

Early '70s Radio focuses on the emergence of commercial music radio "formats," which refer to distinct musical genres aimed toward specific audiences. This formatting revolution took place in a period rife with heated politics, identity anxiety, large-scale disappointments and seemingly insoluble social problems. As industry professionals worked overtime to understand audiences and to generate formats, they also laid the groundwork for market segmentation. Audiences, meanwhile, approached these formats as safe havens wherein they could re-imagine and redefine key issues of identity. A fresh and accessible exercise in audience interpretation, Early '70s Radio is organized according to the era's five prominent formats and analyzes each of these in relation to their targeted demographics, including Top 40, "soft rock", album-oriented rock, soul and country. The book closes by making a case for the significance of early '70s formatting in light of commercial radio today.

So, You Think You're Psychic?

This book is designed to provide valuable insight into how to improve the return on your investment when playing

the lottery. While it does not promise that you will win more often, it does show you how to improve the odds of winning larger amounts when your numbers do come up. So, when you do win that million-dollar jackpot, you will be less likely to have to share it with anyone else. Among the intriguing topics covered are the most popular (and the most foolish) combinations of numbers, why it is impossible to improve the odds of any legitimate lottery, how popular (and thus unprofitable) an attractive-looking ticket might be, why not to follow the suggested numbers from so-called "expert advisors" and why it is important to avoid winning combinations of past drawings. With this book and a little luck, the dream of winning millions might just come true.

Win the Lottery!, written by America's foremost numerologist Ellin Dodge, uses the ancient science of numerology to help you pick your personal lucky numbers for you and the whole family. By reading this short, information-packed book, you will learn the six numbers that belong to you and will bring you luck in any games of chance. When Shakespeare wrote, "What's In A Name," he had no idea the real answer, according to numerology, is your "lucky number."

Martin Gardner's Mathematical Games columns in Scientific American inspired and entertained several generations of mathematicians and scientists. Gardner in his crystal-clear prose illuminated corners of mathematics, especially recreational mathematics, that most people had no idea existed. His playful spirit and inquisitive nature invite the

reader into an exploration of beautiful mathematical ideas along with him. These columns were both a revelation and a gift when he wrote them; no one--before Gardner--had written about mathematics like this. They continue to be a marvel. This volume is a collection of Irving Joshua Matrix columns published in the magazine from 1960-1980. There were several collections of Dr. Matrix, the first in 1967; they were revised as Gardner reconnected with the good doctor over the years. This is the 1985 Prometheus Books edition and contains all the Dr. Matrix columns from the magazine.

Death and Life of Nature in Asian Cities explores the encounter between two processes that are unfolding in diverse patterns across Asia—the rapid urbanization of Asia across big cities, smaller towns, and the newest urban concentrations; and the contentious debates and novel schemes by which nature is figured and emplaced in cities and their conurbations. Contemporary Asian cities displace nature by causing its death and withering, but also embrace it through acts of renewal and the pursuit of sustainability. Contributors in this volume gather case studies from across Asia to address projects of urban greening and reimagining nature in urban life. The book illustrates how the intersection of urban growth and urban nature is a place rich with fresh ideas about urban planning, governance, and social life. This book illuminates a continuing process of discovery and regeneration through which urban natures may well be moving from taken-for-granted infrastructures to more consciously experienced sites of interplay between non-human life and materials, and daily human life experiences. Debates and efforts to recover nature in the city provoke moral

and ethical evaluations of the human ecology of city life, and direct ecologies of urbanism into new avenues like aesthetics, care, perception, and stewardship. "This fascinating collection of essays brings together a series of cutting-edge insights into Asian cities caught in the maelstrom of global environmental change. A particular strength of this book is its commitment to forms of interdisciplinary dialogue and conceptual engagement that unsettle existing geographies of knowledge."

—Matthew Gandy, University of Cambridge; author of *Natura Urbana: Ecological Constellations in Urban Space*
 "This impressive collection on urban ecologies moves beyond the anthropocentric city to expand our understanding of cities as multispecies spaces of active collaboration, decay, and regeneration, offering new possibilities for the flourishing of urban life—both human and non-human—and the design of more just and sustainable cities for all." —Christina Schwenkel, University of California, Riverside; author of *Building Socialism: The Afterlife of East German Architecture in Urban Vietnam*

A fascinating exploration of how insights from computer algorithms can be

applied to our everyday lives, helping to solve common decision-making problems and illuminate the workings of the human mind. All our lives are constrained by limited space and time, limits that give rise to a particular set of problems. What should we do, or leave undone, in a day or a lifetime? How much messiness should we accept? What balance of new activities and familiar favorites is the most fulfilling? These may seem like uniquely human quandaries, but they are not: computers, too, face the same constraints, so computer scientists have been grappling with their version of such issues for decades. And the solutions they've found have much to teach us. In a dazzlingly interdisciplinary work, acclaimed author Brian Christian and cognitive scientist Tom Griffiths show how the algorithms used by computers can also untangle very human questions. They explain how to have better hunches and when to leave things to chance, how to deal with overwhelming choices and how best to connect with others. From finding a spouse to finding a parking spot, from organizing one's inbox to understanding the workings of memory, *Algorithms to Live By* transforms the wisdom of computer science into strategies for human living.
