1937-1939**

Springer
Science &
Business
Media
This book has
evolved out of
experience
gained during
15 years of

teaching a
course on fruit
and vegetable
marketing to
Cornell
University
undergrad
uates. Initially
it was difficult
to assemble
written
material that
would intro
duce the
students to
the industry
and provide
examples to
illustrate
market ing
principles.
Apart from a
few major

studies like
the U. S.
Department of
Agriculture's
survey of
wholesale
markets that
came out in
1964 or the re
port of the
National
Commission
on Food
Marketing
published in
1966 there
was little
research to
turn to in the
early 1970s.
Trade
association
meetings,

trade papers, and personal contacts with members of the industry were the major sources of information. It became necessary to collect information from many different sources to fill the need for a descriptive base. Now there are many good research reports and articles being published on various phases of the industry. There still remains a pressing need, however, to consolidate and interpret

this information so that it provides an understanding of the total system and its various parts. Fresh fruit and vegetable marketing is different in many respects from the marketing of other agricultural and nonagricultural products. Hundreds of individual commodities comprise the total group. Each product has its own special requirements for growing and handling,

with its own quality attributes, merchandising methods, and standards of consumer acceptance.
