The construction of buildings and structures relies on having a thorough understanding of building materials. Without this knowledge it would not be possible to build safe, efficient and long-lasting buildings, structures and dwellings. Building materials in civil engineering provides an overview of the complete range of building materials available to civil engineers

and all those involved in the building and construction industries. The book begins with an introductory chapter describing the basic properties of building materials. Further chapters cover the basic properties of building materials, air hardening cement materials, cement, concrete, building mortar, wall and roof materials, construction steel, wood, waterproof materials, building plastics, heat-insulating materials and sound-absorbing materials and finishing materials. Each chapter includes a series of questions, allowing readers to test the knowledge they have gained. A detailed appendix gives information on the testing of building materials. With its distinguished editor and eminent editorial committee, Building materials in civil engineering is a standard introductory reference book on the complete range of building materials. It is aimed at students of civil engineering, construction engineering and allied courses including water supply and drainage engineering. It also serves as a source of essential background information for engineers and professionals in the civil engineering and construction sector. Provides an overview of the complete range of building materials available to civil engineers and all those involved in the building and construction industries Explores the basic properties of building materials featuring air hardening cement materials, wall and roof

Lawyers involved in international commercial transactions know well that unforeseen events affecting the performance of a party often arise. Not surprisingly, exemptions for non-performance are dealt with in a significant number of arbitral awards. This very useful book thoroughly analyzes contemporary approaches, particularly as manifested in case law, to the scope and content of the principles of exemption for non-performance which are commonly referred to as 'force majeure' and 'hardship.' The author shows that the 'general principles of law' approach addresses this concern most effectively. Generally accepted and understood by the business world at large, this approach encompasses principles of international commercial contracts derived from a variety of legal systems. It's most important 'restatements' are found in the 1980 United Nations Convention on Contracts for the International Sale of Goods (CISG) and the UNIDROIT Principles of International Commercial Contracts (UPICC). Establishing specific standards and "case groups" for the exemptions under review, the analysis treats such recurring elements as the following: contractual risk allocations; unforeseeability of an impediment; impediments beyond the typical sphere of risk and control of the obligor; responsibility for third parties (subcontractors, suppliers); legal impediments (acts of public authority) and effect of mandatory rules; involvement of states or state enterprises; interpretation of force majeure and hardship clauses; hardship threshold test; frustration of purpose; irreconcilable differences; comparison with exemptions under domestic legal systems (impossibility of performance, frustration of contract, impracticability) The book is a major contribution to the development of the use of general principles of law in international commercial arbitration. It may be used as a comprehensive commentary on the force majeure and hardship provisions of the UPICC, as well as on Art. 79 of the CISG. In addition, as an insightful investigation into the fundamental question of the limits of the principle of sanctity of contracts, this book is sure to capture the attention of business lawyers and interested academics everywhere.

Since Audubon visited Galveston in 1837, artists have flocked to

the island, some just passing through and others staying their entire lives. But because Galveston remained remote from the nation's cultural centers, its artistic contributions were initially largely ignored. However, the recovery effort from the Great Storm of 1900 spurred a new sense of local pride and civic determination. The Cotton Carnivals attracted people throughout the state, the city's artists united to promote local art through the creation of the Galveston Art League and photographers modernized their practices. In the early 1920s, a new generation, freed from nineteenth-century traditions, started to gain attention both on and off the island. Explore Galveston's artistic heritage with local historian Pat Jakobi, from the portraits of Thomas Flintoff to the Balinese Room murals of Marie Marchi Ragone.

Annual Report of the Secretary of War Elsevier

For decades it seemed clear that EC competition law was enforceable effectively at the national level, and ECJ case law has continued to bear this out. In recent years, however, the Commission has been proposing harmonization of national rules of procedure in competition cases, implying that procedural autonomy is insufficient on its own to produce an effective enforcement system in this area. As the authors of this book clearly demonstrate, this suggests a binary system governing the enforcement of EC Articles 81 and 82: namely, that led by the Commission through directives and eventual regulations, and that built on ECJ principles in areas not dealt with by such Community instruments. This book describes and analyzes not only the specific Commission recommendations, but also the manner and extent to which these recommendations are or may be implemented in civil procedure. In particular, the authors consider changes which may be required if these recommendations are incorporated into Dutch and English rules of civil procedure. Also addressed are elements of procedure not mentioned by the Commission but which might usefully be considered in the context of ECJ principles of effectiveness, equivalence and effective judicial protection of rights. At the heart of the study is a detailed analysis of the Commission White Paper on Damages Actions and the Commission Staff Working Paper, both issued early in 2009. The in-depth analysis ranges over procedural aspects of such elements as the following: and standing; and disclosure and access to evidence; and burden of proof; and fault/no fault and costs of damages actions; and injunctions; and civil versus administrative enforcement; and limitations; and leniency programmes;

and collective actions; and confidentiality; and forms of compensation. Anticipating as it does a looming impasse in European competition law, this remarkable book sheds defining light on the real implications of EC competition law for parties to damages actions, not only in the national systems studied but for all Member States. For practitioners and jurists it offers a particularly useful approach to the handling of cases involving European competition law, and also serves as a guide to current trends and as a clarification of doctrine.
