JAZMINE SHERLYN

The Excerpta Constantiniana and the Byzantine Appropriation of the Past Who Goes There? (Filmed as The Thing)

"Who Goes There?" is the novella that formed the basis of John Carpenter's film "The Thing." John W. Campbell's classic tells of an antarctic research base that discovers and thaws the ancient, frozen body of a crash-landed alien -- with terrifying results!

Ulrich's Periodicals Directory De Gruyter Mouton

The volume contains 23 papers read at the international conference "Historical Corpora 2012", which was hosted by the LOEWE Research Cluster "Digital Humanities" of the State of Hesse at the University of Frankfurt on December 6-8, 2012. The papers, which include three keynote speeches, have been duly updated for the present volume. The contributions take a broad variety of perspectives on "historical corpora", including their structuring, their management, and various other facets. In addition to this, they cover a large amount of different languages, extending from German - in nearly all its historical facettes - across the Romance languages into the Caucasus and from the recent past down into antiquity. Differences also concern the linguistic interests prevailing in the papers, which may focus on syntactic, semantic, pragmatic, lexicological or other phenomena.

Dàgáàrè Narr Francke Attempto Verlag

This volume provides an up-to-date survey of the field of corpus linguistics, a field whose methodology has revolutionized much of the empirical work done in most fields of linguistic study over the past decade. Corpus linguistics investigates human language by starting out from large collections of texts - spoken, written, or recorded. These language corpora, which are now regularly available in electronic form, are the basis for quantitative and qualitative research on almost any question of linguistic interest. Many techniques that are in use in corpus linguistics today are rooted in the tradition of the late 18th and 19th century, when linguistics began to make use of mathematical and empirical methods. Modern corpus linguistics has

used and developed these methods in close connection with computer science and computational linguistics. The handbook sketches the history of corpus linguistics, shows its potential, discusses its problems, and describes various methods of collecting, annotating, and searching corpora as well as processing corpus data. It also reports case studies that illustrate the wide range of linguistic research questions addressed in corpus linguistics. The over 60 articles included in the handbook are divided into five sections: (1) the origins and history of corpus linguistics and surveys of its relationship to central fields of linguistics (2) corpus compilation (3) corpus types (4) preprocessing of corpora (5) the use and exploitation of corpora. The final section gives an overview of the results of corpus studies obtained in phonetics, phonology, morphology, syntax, semantics, sociolinguistics, historical linguistics, stylometry, dialectology, and discourse analysis. It also reports on recent advances made in human and machine translation, contrastive studies, computer-assisted language learning, and automatic summarization. The contributors to the volume are internationally known experts in their respective fields. The handbook is intended for a wide audience ranging from teachers, university students, and scholars to anyone interested in the use of computers in linguistic analyses and applications.

Corpus Linguistics Spotlight Poets

Presents the first comprehensive study of the 'Byzantine Google' and how it reshaped Byzantine court culture in the tenth century.

New Methods In Language Processing Routledge

Studies in Computational Linguistics presents authoritative texts from an international team of leading computational linguists. The books range from the senior undergraduate textbook to the research level monograph and provide a showcase for a broad range of recent developments in the field.

The series should be interesting reading for researchers and students alike involved at this interface of linguistics and computing.
