India has a strong and ancient tradition of astronomy, which seamlessly merges with the current activities in Astronomy and Astrophysics in the country. While the younger generation of astronomers and students are reasonably familiar with the current facilities and the astronomical research, they might not have an equally good knowledge of the rich history of Indian astronomy. This particular volume, brought out as a part of the Platinum Jubilee Celebrations of Indian National Science Academy, concentrates on selected aspects of historical development of Indian astronomy in the form of six invited chapters. Two of the chapters – by Balachandra Rao and M.S. Sriram – cover ancient astronomy and the development of calculus in the ancient Kerala text Yuktibhasa. The other four chapters by B.V. Sreekantan, Siraj Hasan, Govind Swarup and Jayant Narlikar deal with the contemporary history of Indian astronomy covering space astronomy, optical astronomy, radio astronomy and developments in relativistic astrophysics. These chapters, written by experts in the field, provide an in-depth study of the subject and make this volume quite unique.

Asia in the past nurtured great civilisations and cultures, some of which withstood the onslaughts of the mighty West. After suffering from the evils of colonial rule, Asia today is poised to occupy the centre stage of the world arena, with India, China and Japan playing leading role. In this context, it is all the more necessary for college and university students in Asia and the west to acquaint themselves with the history of Asia. Hence this book. The book is different from others of this genre, as it connects the ancient and medieval Asia with the modern world. It deals with the history of each country in its geographical setting with the interaction and impact of neighbouring countries. Early migrations, settlements, formation of kingdoms and empires, socio-economic aspects of Islamic conquests and the advent of Western powers are all accounted for. The modern period (up to 2004) is treated in a detailed manner covering topics like colonisation, impact of Western civilisation, the rise of nationalism and the achievement of independence. The current history highlights subversion of democracies, ushering in of military rule, ethnic conflicts, movements for the restoration of democracy, oppression of minorities, economic issues, nuclear proliferation and the war on terror -- all in a fascinating manner -- with maps, bibliography, and an index to stimulate reader's interest.

Europe's political scene has changed a great deal after 1990. It was marked by the liberation of Eastern Europe from the erstwhile Soviet Empire, and the emergence of European Union. In a unipolar world, Europe would like to play a meaningful and fruitful role for bringing about peace and prosperity. The European Union is fast emerging as an economic power house. It is supplementing the role of United Nations in its efforts to maintain the peace and stability in the world. The Lisbon Treaty which the 27 member of the EU have ratified, has assigned a far bigger role to the EU than mere economic integration. The original purpose of founding the EU was to prevent wars and national rivalries through instrumentality of economic integration. Hence, a separate chapter included in this edition.

The history of philosophy aims to give a connected account of the different attempts which have been made to solve the problem of existence or to render intelligible to us our world of experience. It is the author of the development of reasoned human thought from its earliest beginnings down to the present time; not a mere chronological enumeration and exposition of philosophical theories, but a study of these in their relation to one another, the times in which they are produced, and the thinkers by whom they are offered. While every system of thought is more or less dependent on the civilization in which it arises, the character of preceding systems, and the personality of its author, it, in turn, exercises a potent influence on the conceptions and institutions of its own and succeeding ages. The history of philosophy must, therefore, endeavour to insert each world-view in its proper setting, to understand it as a part of an organic whole, to connect it with the intellectual, political, moral, social, and religious factors of its present, past, and future. It must also attempt to trace the line of progress in the history of human speculation: show how the mental attitude called philosophy arises, how the different problems and the solutions that are offered provoke new questions and answers, and what advance has been made, on the different stages, towards reaching the goal. Anthropological archaeologists have long attempted to develop models that will let them better understand the evolution of human social organization. In our search to understand how chiefdoms and states evolve, and how those societies differ from egalitarian 'bands', we have neglected to develop models that will aid the understanding of the wide range of variability that exists between them. This volume attempts to fill this gap by exploring social organization in tribal - or 'autonomous village' - societies from several different ethnographic, ethnohistoric, and archaeological contexts - from the Pre-Pottery Neolithic Period in the Near East to the contemporary Jivaro of Amazonia.
