 ANALYSIS & CHEMICAL BONDING (1)  
 Covalent bonds may be classified as polar  
 or nonpolar based on the difference in  
 electronegativity between two atoms.  
 Look up electronegativity values in your  
 textbook: a.. Why are C-H bonds  
 considered nonpolar? b. Which is more  
 polar, an O-H or N-H bond? Explain.LAB

AP Chemistry Qualitative Analysis and Chemical Bonding Lab Chemistry 201 Qualitative Analysis Introduction General comments: It is always a good idea to use as few chemicals as possible; it makes sense both from consideration of lab safety and chemical waste disposal. Therefore, keep in mind that each of the chemical tests that are discussed below can be done with a few drops of solution. Remember that Chem 201 - Qualitative Analysis Lab - Just Only Qualitative analysis is a method used for identification of ions or compounds in a sample. In many cases, qualitative analysis will also involve the separation of ions or compounds in a mixture. Examples of qualitative tests would include ion precipitation reactions (solubility tests) or chemical reactivity tests. Experiment Qualitative Analysis 1 Qualitative analysis involves chemical tests, such as the Kastle-Meyer test for blood or the iodine test for starch. Another common qualitative test, used in inorganic chemical analysis, is the flame test. Definition of Qualitative Analysis in Chemistry Gravimetric methods were the first techniques used for quantitative chemical analysis, and they remain important tools in the modern chemistry laboratory. The required change of state in a gravimetric analysis may be achieved by various physical and chemical processes. Quantitative Chemical Analysis - Chemistry Qualitative Analysis Background Unlike covalent compounds, which can be identified using physical properties like boiling point and refractive index, ionic compounds are more appropriately identified with their chemical properties.
