Orchestrating Value: Population Health in the Digital Age focuses on the leadership thinking and mindset changes needed to transition from brick and mortar healthcare to digital health and connected care. The fourth industrial revolution, with convergent disruptions in biology, business models, computer science, and culture, has the potential to transform the healthcare system like never before. Digital health startups, Big Tech and progressive health systems will change the way health and healthcare are delivered to increasingly digitally savvy consumers. This book challenges readers to rethink the role of data and technology in creating and designing the future. Rather than hooking value-based care and population health management onto traditional healthcare business models, it focuses on the emergence of digital ecosystems. Using the analogy of an orchestra, the book introduces the importance of platforms in the formation of communities and markets with network effects to allow participants to collaborate, create, and innovate. With quotes from healthcare industry leaders and change agents, it helps the strategist understand the three stages of the transition from volume to value. As conductor of the orchestra, the CEO must navigate important leadership pivots to move beyond silo-based thinking. Finally, the Care Management Platform is described as a new operating model for population health in the digital age. As the next generation beyond foundational EHRs, capabilities such as interoperability, analytics, care management and patient/consumer engagement will fundamentally change the way healthcare enterprises operate and deliver value to customers.

Although it has often been criticized in the public mind as being short termist and having adverse consequences for employment, in reality this is far from the case. Here, John Gilligan and Mike Wright dispel some of the biggest myths and misconceptions about private equity. The book provides a unique and authoritative source from a leading practitioner and academic for practitioners, policymakers, and researchers that explains in detail what private equity involves and reviews systematic evidence of what the impact of private equity has been. Written in a highly accessible style, the book takes the reader through what private equity means, the different actors involved, and issues concerning sourcing, checking out, valuing, and structuring deals. The various themes from the systematic academic evidence are highlighted in numerous summary vignettes placed alongside the text that discuss the practical aspects. The main part of the work concludes with an up-to-date discussion by the authors, informed commentators on the key issues in the lively debate about private equity. The book further contains summary tables of the academic research carried out over the past three decades across the private equity landscape including: the returns to investors, economic performance, impact on R&D and employees, and the longevity and life-cycle of private equity backed deals.

While Russian computer scientists are notorious for their interference in the 2016 US presidential election, they are ubiquitous on Wall Street and coveted by international IT firms and often perceive themselves as the present manifestation of the past glory of Soviet scientific prowess. Drawing on over three hundred in-depth interviews, the contributors to *From Russia with Code* trace the practices, education, careers, networks, migrations, and lives of Russian IT professionals at home and abroad, showing how they function as key figures in the tense political and ideological environment of technological innovation in post-Soviet Russia. Among other topics, they analyze coders' creation of both transnational communities and local networks of political activists; Moscow's use of IT funding to control peripheral regions; brain drain and the experiences of coders living abroad in the United Kingdom, United States, Israel, and Finland; and the possible meanings of Russian computing systems in a heterogeneous nation and industry. Highlighting the centrality of computer scientists to post-Soviet economic mobilization in Russia, the contributors offer new insights into the difficulties through which a new entrepreneurial culture emerges in a rapidly changing world. Contributors: Irina Antoschyuk, Mario Biagioli, Ksenia Ermoshina, Marina Fedorova, Andrey Indukaev, Alina Kontareva, Diana Kurkovsky, Vincent Lépinay, Alexandra Masalskaya, Daria Savchenko, Liubava Shatokhina, Alexandra Simonova, Ksenia Tatarchenko, Zinaida Vasilyeva, Dimitrii Zhikharevich
