Identification and Treatment of Life-Threatening Hemorrhage CRC Press

Trauma is the leading cause of death among people under the age of 40 and it ranks third for all age groups. Still, relatively few

clinicians specialize in trauma and training is often obtained through experience. The number of trauma patients is expected to continue to grow as pre-hospital care continues to advance. As well, hospitals increasingly see trauma treatment, which requires no pre-approval, as a good source of revenue. Given these developments, the number of opportunities for specialists trained in trauma, including anesthesiologists and critical care physicians, will expand in the years ahead. This book addresses the need for an up-to-date, comprehensive and clinically focused volume for practitioners and trainees in trauma anesthesia and critical care. It is organized by organ system. The editor is an attending physician at a major urban hospital center recognized worldwide for its outstanding emergency medical services including trauma care and is recruiting leading trauma anesthesiologists to contribute. Anesthesiologists, pain medicine physicians, critical care physicians and trainees are the target audience.

Advanced Training in Anaesthesia Lippincott Williams & Wilkins
Ryan's Ballistic Trauma 3rd Edition provides a concise guide to the clinical and operational issues surrounding the management of the ballistic casualty. This book crystallizes the knowledge and experience accrued by those dealing with ballistic trauma on a regular basis and extends this to those who have to manage these patients on an occasional basis only. **Ryan's Ballistic Trauma 3rd Edition** is a valuable reference tool for all medical and paramedical personnel involved in the care of patients with ballistic injury. It is especially relevant for consultants and senior trainees in surgery, anesthesia and emergency medicine who are likely to be involved in the management of these unique injuries. This book is essential reading for pre-hospital care providers and nurses working in the emergency room, as well as military surgeons and medical and nursing staff on deployment in regions of conflict.

Acute Care Surgery Lippincott Williams & Wilkins

This is the first book exploring the unique dynamics created by a multidisciplinary trauma team and how crisis management strategies can improve teamwork and communication and, potentially, improve patient resuscitation outcomes. Crisis resource management (CRM) is integral to the way that we manage ourselves, team members, and patients during emergency situations. It is essentially the ability to translate knowledge of what needs to be done into effective actions during

a crisis situation. Building on the revolutionary American College of Surgeons Advanced Trauma Life Support (ATLS®) course, **Trauma Team Dynamics** illustrates the integration of the principles of CRM to team dynamics throughout the resuscitation -from the scene, through pre-hospital care and transport, to the trauma bay, and finally to definitive care and beyond. The editors and contributors are international experts in trauma, critical care, emergency medicine, nursing, respiratory therapy, and pre-hospital care and include NASA- and United States military-affiliated experts. **Trauma Team Dynamics** is intended for use as both a day-to-day clinical resource and a reference text, and includes self-assessment questions as well as guidance on CRM curriculum design and implementation.

PA Review for the PANCE ATLS, Advanced Trauma Life Support for Doctors

The Manual of Pediatric Intensive Care distills the salient information required to provide state-of-the-art care for the acutely ill and injured child into a concise, readily useful guide. Providing timely and appropriate care is a daunting challenge for frontline caregivers, early response and transport teams, and pediatric and critical care trainees. This manual delivers the basic information and practical advice needed by those who provide urgently needed care to children in a format that occupies the middle ground between the voluminous, highly detailed textbook and the "to do" lists that provide no physiological background for the approach presented. An introduction for beginners and a valuable aid for those already engaged in the care of acutely ill children, the **Manual of Pediatric Intensive Care** comprises contributions from specialists from around the world, including doctors, nurses, pharmacists, and respiratory therapists. Key Features Stresses the importance of team dynamics, ethical decision-making, and family involvement in care; Concise, clearly organized delivery of basic and essential information needed on the spot by ICU care providers; Special chapters on septic shock, toxicology, and oncology.

A Revision Guide Springer Science & Business Media
Written by Johns Hopkins University School of Medicine faculty and surgical residents, the second edition of **The Johns Hopkins ABSITE Review Manual** delivers comprehensive coverage of the American Board of Surgery In-Training Examination through two full-length practice tests. Both tests are based on actual key words from recent ABSITEs, and are accompanied by test review sections, which go over every practice test question and answer, providing rationales behind surgical decision-making. ABSITE-style question format familiarizes readers with the test's presentation and content. This edition features twice the number of questions as in the previous edition, offering even more opportunities for self-paced review. Rationales for correct and incorrect responses help to identify the test-taker's strengths and weaknesses. This book is ideal not only for those preparing for the ABSITE, but also for surgeons and residents studying for the general surgery qualifying exam and for all surgical residents seeking to review key topics during rotations.
