TRB's National Cooperative Highway

Research Program (NCHRP) Report 672:

Roundabouts: An Informational Guide -

Second Edition explores the planning, design, construction, maintenance, and operation of roundabouts. The report also addresses issues that may be useful in

helping to explain the trade-offs associated with roundabouts. This report updates the U.S. Federal Highway Administration's Roundabouts: An Informational Guide, based on experience gained in the United States since that guide was published in 2000.

Filipacchi Publishing

From nineteenth-century whaling to a

multitude of firms pursuing entrepreneurial finance today, venture finance reflects a deep-seated tradition in the deployment of risk capital in the United States. Tom Nicholas's history of the venture capital industry offers a roller coaster ride through America's ongoing pursuit of financial gain.

"50 Years with Car and Driver

commemorates the golden anniversary of the most popular car magazine on the planet. But more than that, 50 Years with Car and Driver tells the story of the American automobile and how the editors of the magazine witnessed that history and reported on it, firsthand. A look at how Car and Driver evolved from its beginnings as Sports Cars Illustrated, in the able hands of great automotive journalists such as Ken Purdy and John Christy, and then came into its own as the musclecar era of the Sixties dawned. Writers such as David E. Davis, Jr., Brock Yates and Patrick Bedard helped to craft a literary car magazine that drew as much inspiration from Tom Wolfe's writing as it did from the great cars of the day." "Through the Seventies the magazine's reputation solidified as the technical authority on new cars, and the literary tradition continued with such writers as Don Sherman and author P.J. O'Rourke." "Throughout the Eighties, the magazine prospered even

when its writers went off the deep end - literally, getting stranded in Mexico during a Baja comparison test. Car and Driver watched over the virtual rebirth of the American car during that decade, with the renaissance at Ford through the Taurus and the revival of the Corvette, while keeping its lock on the strongest feature writing in the auto magazines with stories like Brock Yates's thirty-years-past observance of the death of James Dean." "The Nineties saw Car and Driver continue its leadership as the world's largest-selling automotive magazine. From the introduction of the Acura NSX and the Mazda Miata to the brand-new Mustangs and Corvettes that have come in just the past years, Car and Driver has been the authority that readers trust when it comes to 0-60 times, road tests and reviews." "Fifty Years with Car and Driver combines classic stories from the magazine, commentary by former staffers including the author, vintage and modern photos of the hottest and most important cars reviewed by the magazines, as well as stories from behind the scenes - with all the attitude, expertise and visual excitement readers have come to expect

from the magazine itself."--BOOK JACKET.

This volume contains the reviews and poster papers presented at the workshop Solar Convection and Oscillations and their Relationship: SCORe '96, held in Arhus, Denmark, May 27 - 31, 1996. The aim of this workshop was to bring together experts in the fields of convection and helioseismology, and to stimulate collaborations and joint research. The participation to this workshop was purposely kept limited in order to provide optimal conditions for informal discussions. In autumn of 1995 the long-awaited GONG network of solar telescopes became fully operational and the first data already show significant improvement over existing datasets on solar oscillations. Furthermore, in December of 1995 the satellite SOHO was launched which, together with GONG, provides a major step forward in both the quantity and the quality of available solar oscillation data. It is with this in mind that we decided to organize the workshop to prepare for the optimal use of this wealth of data, with which to deepen our understanding of

solar structure and specifically, of one of the longest-standing problems in solar and stellar modelling: the treatment of convection.

Am General Humvee Bloomsbury Publishing

With 400 information-packed pages and over 1000 full color photographs, 2000 ROAD REPORT(C) is the best to buying a new car. Included are details on every model not easily found anywhere else: -- historical overview of the model's development -- safety features -- depreciation rate -- operating costs per mile -- insurance premium data -- sales performance -- market share -- overall evaluation typical customer profile -- destination charge -- minimum and maximum pricing for better bargaining -- behind-the-scene anecdotes The listings on the hundreds of models contain comprehensive information on Model Range, Technical Features, Pros and Cons, and a Conclusion, all of which include comments on: style, performance, value, handling, interior and exterior design, traction control, visibility, engine size, rigidity, brakes, storage, fuel consumption, soundproofing, cabin space, steering,

cockpit, transmission, access, engine, maneuverability, instruments, ride comfort and ergonomics. The full page, easy-to-read spread on each model also includes: - ratings of the model concept, driving, original equipment, comfort and budget, plus an overall rating -- new features for year 2000 models -- engine, transmission and performance specs -- price and equipment details -- warranties offered As well, the At a Glance...box offers the model history, model comparisons, demographic data, insurance and sales numbers, specs and warranty maintenance requirements. 2000 ROAD REPORT (C) includes every major car maker, plus some of the specialized manufacturers, Lamborghini, Ferrari and AM General, maker of the Hummer. Also included is information about what's new in automobile technology, as well as full-color spreads on the world's major auto shows in Tokyo, Geneva, New York and Detroit. With a glossary and over 1000 full-color photos, 2000 ROAD-REPORT(C) is absolutely packed with information. The discovery of chemical elements in celestial bodies and the first estimates of the chemical composition of the solar atmosphere were early results of Astrophysics - the subdiscipline of Astronomy that was originally concerned with the general laws of radiation and with spectroscopy. Following the initial quantitative abundance studies by Henry Norris Russell and by Cecilia Payne-Gaposchkin, a tremendous amount of theoretical, observational, laboratory and computational work led to a steadily improving body of knowledge of photospheric abundances - a body of

knowledge that served to guide the theory of stellar evolution. Solar abundances determined from photospheric spectra, together with the very similar abundances determined from carbonaceous chondrites (where extensive information on isotopic composition is available as well), are nowadays the reference for all cosmic composition measures. Early astrophysical studies of the solar photospheric composition made use of atmosphere models and atomic data. Consistent abundances derived from different atmospheric layers and from lines of different strength helped to confirm and establish both models and atomic data, and eventually led to the now accepted, so-called "absolute" abundance values - which, for practical reasons, however, are usually given relative to the number of hydrogen nuclei.

Popular Science

The Humvee, the modern-day US military

four-wheel-drive successor to the Willys Jeep, is used by numerous armed forces around the world and in some civilian adaptations. Over 10,000 Humvees were deployed in numerous roles by coalition forces during the Iraq war. At least 25 variants of this highly versatile vehicle have been produced, from unarmoured light transport to surface-to-air missile platform, including ambulances, tracked versions, troop carriers and special ops variants. This manual provides a unique insight into the world of military Humvees, with an emphasis on military operation and equipment.

U.S. News & World Report

One of the most remarkable mechanized campaigns of recent years pitted the brutal and heavily armed jihadis of Islamic State against an improvised force belonging to the Kurdish YPG (later the SDF). While some Kurdish vehicles were originally from Syrian Army stocks or captured from ISIS, many others were extraordinary homemade AFVs based on truck or digger mechanicals, or duskas, the Kurds' version of the technical. Before

US air power was sent to Syria, these were the Kurds' most powerful and mobile weapons. Co-written by a British volunteer who fought with the Kurds and an academic expert on armoured warfare, this study explains how the Kurds built and used their AFVs in the war against 'Daesh', and identifies as far as possible which vehicles took part in major battles, such as Kobane, Manbij and Raqqa. With detailed new artwork depicting the Kurds' range of armour and many previously unpublished photos, this is an original and fascinating look at modern improvised mechanized

warfare.
