"Science Friday" Summer Reading Pick

**Discover magazine Top 5 Summer

Reads** **People magazine Best Summer

Reads** "A lovely, big-hearted

book...brimming with compassion and the

tales of the many, many humans who

devote their days to making animals well"

(The New York Times). Have you ever

wondered if your dog might be a bit

depressed? How about heartbroken or

homesick? Animal Madness takes these

questions seriously, exploring the topic of

mental health and recovery in the animal

kingdom and turning up lessons that

Publishers Weekly calls

"Illuminating...Braitman's delightful

balance of humor and poignancy brings

each case of life...[Animal Madness's]

continuous dose of hope should prove

medicinal for humans and animals alike."

Susan Orlean calls Animal Madness "a

marvelous, smart, eloquent book—as

much about human emotion as it is about

animals and their inner lives." It is "a

gem...that can teach us much about the

wildness of our own minds" (Psychology

Today).

Basic Manual

With contributions from a team of leading

experts, this volume provides a

comprehensive survey of recent

achievements in our scientific understanding of evolution. The questions it asks concern the beginnings of the universe, the origin of life and the chances of its arising at all, the role of contingency, and the search for universal features in the plethora of evolutionary phenomena. Rather than oversimplified or premature answers, the chapters provide a clear picture of how these essential problems are being tackled, enabling the reader to understand current thinking and open questions. The tools employed stem from a range of disciplines including mathematics, physics, biochemistry and cell biology. Self-organization as an overarching concept is demonstrated in the most diverse areas: from galaxy formation in the universe to spindle and aster formation in the cell. Chemical master equations, population dynamics, and evolutionary game theory are presented as suitable frameworks for understanding the universal mechanisms and organizational principles observed in a wide range of living units, ranging from cells to societies. This book will provide engaging reading and food for thought for all those seeking a deeper understanding of the science of evolution.

From the Planck Epoch to Complex Multicellular Life Simon and Schuster

An illustrated guide to the brain's development and functions presents accessible coverage of how the brain works and the latest scientific discoveries, sharing lifestyle tips on how to promote brain health through exercise, nutrition, and specific bolstering activities.

The Complete Mind Allen & Unwin
Earth, Fire, Air, Water. One misstep and they lose it all. For the last time. Michael Merrick understands pressure. He's the only parent his three brothers have had for years. His power to control Earth could

kill someone if he miscalculates. Now an Elemental Guide has it in for his family, and he's all that stands in the way. His girlfriend, Hannah, understands pressure too. She's got a child of her own, and a job as a firefighter that could put her life in danger at any moment. But there are people who have had enough of Michael's defiance, his family's 'bad luck'. Before he knows it, Michael's enemies have turned into the Merricks' enemies, and they're armed for war. They're not interested in surrender. But Michael isn't the white flag type anyway. Everything is set for the final showdown. Four elements, one family. Will they hold together, or be torn apart?

Life Studies and For the Union Dead Farrar Straus & Giroux

Thoroughly updated to reflect the post-crisis, global, and digital economy.
