### Oxford Cases in Medicine and Surgery

Bailliere Tindall Limited

This book is intended to help medical students with their preparations for medical short case examinations, and through this process enhance the depth and breadth of their knowledge of clinical medicine as well as their clinical skills. Though particularly useful to students sitting their final clinical exams, it will also be of interest to more junior students, particularly those who face medical short case clinical exams in their early clinical years. It aims to be useful whether the exam format is traditional or in more modern variations such as the Objective Structured Clinical Examination (OSCE).

### **Medical Short Cases for Medical Students**

McGraw Hill Professional  
This is a practical revision book for learning techniques to pass clinical examinations in all the major clinical subjects for final examinations. The book covers Medicine, Surgery, Obstetrics and Gynaecology, Paediatrics and Psychiatry. Each section starts with advice on the general aspects of examination of the patients, followed by a series of clinical problems presented in the form of cases. Each case includes a fact file of key points to remember about this condition, and advises on the likely discussion points that can be asked. The book outlines in each clinical problem the likely use of OSCE, short and long case examinations.

Elsevier Health Sciences

This new edition is a practical guide to patient examination and diagnosis for medical students. Beginning with an

introduction to history taking and general physical examination, the following sections discuss patient examination in different systemic regions. The text covers anatomy and physiology to give students a better understanding of each system and describes symptoms and history of common clinical disorders before explaining examination techniques. The third edition has been fully revised to provide the latest information and guidance, and is further enhanced by clinical photographs, diagrams and tables. Key points Practical guide to patient examination and diagnosis for medical students Fully revised, third edition Covers all key systemic regions Previous edition (9789386150417) published in 2016

### Short and Long Cases in Clinical Medicine

Elsevier India  
Updated focusing on the learning needs of the new format MRCPCH Clinical examination. To maximise revision time, 3 parts represent the Clinical exam stations: Part 1 History Taking & Management Planning; Part 2 Communication Skills; Part 3 Clinical Stations. Written by paediatricians with experience of teaching and helping to run previous exams.

### 200 Short Cases in Clinical Medicine

JP Medical Ltd  
Presented as a selection of long and short cases, this book is a practical guide to the diagnosis and management of neurological disorders and diseases for trainees. Each case is explained in question and answer format as it would be on clinical ward rounds, with emphasis on accurate diagnosis based on history taking and clinical findings. Divided into seven sections, each featuring several cases, the book covers higher mental functions/cerebral

hemisphere, cranial nerves, spinal cord, ataxia, peripheral neuropathy, neuromuscular junction disorders, and extrapyramidal syndrome. The text is further enhanced by clinical images, diagrams and tables, and concludes with a section of 'pearls for viva voce examination'. Key points Practical guide to diagnosis and management of neurological disorders Presented as a selection of long and short cases, each in question and answer format Emphasis on accurate diagnosis based on history taking and clinical findings Features section of 'pearls for viva voce examination'

The second edition of Short Cases in Clinical Neurology is fully revised and updated to incorporate all recent advances, making it a quick and handy guide on the subject. The book focuses on the hows and whys of clinical neurology. It includes extensive factual material on individual clinical diagnosis, though the emphasis is on giving important information in an easy sequential way for clinical examination to reach proper diagnosis with neurologic conditions. The book covers what clinicians need to know to assess and manage the patients they will encounter in general medical practice, including the application of a logical approach to diagnosis, neurologic examination and the way to interpret the findings. It includes: - High-yield information is emphasized throughout the text to highlight key facts for easy retention. - Short, easy-to-read chapters to help the busy resident, fellow and clinician on the go. - Everything clinicians need to know in one comprehensive resource. - Expanded coverage-related questions for assessing

self-assessment.

**Clinical Cases in Tropical Medicine**

BPP Learning Media Limited

Presents trainees with detailed clinical cases for numerous diseases and disorders covering various body systems including respiratory, gastroenterology, neurology and haematology. Questions and answers are provided at the end of each case.

*Long Cases in Clinical Medicine* Jaypee Brothers Medical Publishers

Using an easily accessible, highly templated format, Clinical Cases in Tropical Medicine, 2nd Edition, provides more than 100 realistic scenarios for tropical infectious diseases. Full-color photographs and maps, a convenient question-and-answer presentation, and succinct summary boxes help you identify and understand the tropical diseases you're likely to encounter. This up-to-date 2nd Edition is an excellent resource and study tool for infectious diseases fellows, doctors preparing for exams in tropical medicine, primary care doctors with patients who are global travelers, and global health nurses and practitioners alike. Offers realistic scenarios for encountering patients in rural, resource-poor settings, presenting cases as "unknowns," just as in a real clinic or emergency situation. Covers newly emerging diseases such as Zika virus, severe fever with thrombocytopenia syndrome (SFTS), and knowlesi malaria. Features topics in migrant medicine of particular importance to clinicians in non-tropical countries, including louse-borne-relapsing fever, spinal brucellosis, and hyperreactive malarial splenomegaly. Includes "classic" tropical diseases such as African trypanosomiasis, chagas, leprosy, and yaws. Reflects the use of novel diagnostics used in resource-poor

settings, as well as developing drug resistance in relevant cases. Provides a useful index and map that organize cases geographically, for a targeted approach to study. Serves as a companion to Manson's Tropical Diseases, with a reading list at the end of each case referring to the corresponding chapter in the larger text.

EMQs are a popular method of assessing how broad a knowledge of medicine an undergraduate has acquired. They can, however, be difficult to prepare for, and the best way to build understanding and confidence is with practice. Presenting 100 key EMQs covering the core areas of medicine and surgery, care had been taken by the authors to structure the questions and answers so that they reflect accurately the themes encountered during study and, specifically, in final exams. Each subject covered is accompanied by a revision section which summarises key points and cross references them to other questions for revision purposes.

Questions related to pharmacology, an area which many students find particularly challenging, are threaded throughout the book where relevant, mirroring the integrated teaching methods common to most medical schools. The second edition of EMQs in Clinical Medicine has been thoroughly revised and updated to reflect medical developments, while retaining the clear and comprehensive approach and popular revision boxes of its predecessor. The authors' first-hand experience of EMQ-based examinations, and awareness of the importance of reliable and accurate revision guides to medical students, ensure EMQs in Clinical Medicine remains an invaluable

resource for all medical students undertaking the clinical part of their training, and an ideal companion during finals preparation.

### **Mastery In General Surgery Short Cases**

Blackwell Publishing

Rare and Interesting Cases in Pulmonary Medicine provides a look into the uncommon diseases encountered in the field of pulmonary medicine. Using a case-based approach, the book provides clinical scenarios that include relevant accompanying radiology and pathology. Also included are frequently asked questions for each area, as well as a diagnosis and summary, presenting the reader with the most high yield information on each topic. Appropriate for medical students, residents, fellows, and physicians interested in pulmonary medicine, the case-based approach to each topic allows accessibility to the uncommon diseases of the field while also highlighting high yield and important points. Provides case-based approaches to the uncommon diseases of pulmonary medicine, including supporting radiology and pathology. Includes uncommon case studies, providing relevant references for further reading and research opportunities. Presents related topics with accompanying clinical pearls for direct application in the field.

MRCPCCH Clinical JP Medical Ltd

A guide to how to approach and pass the short cases in the clinical part of the Final MB and MRCP examinations. Each chapter begins with a brief summary of how to examine the relevant system and goes on to outline a selection of 200 clinical cases.

*Short Cases in Clinical Exams of Internal Medicine* ACP Press

This is new edition of the book previously called Acute Clinical Medicine

in the highly popular Kumar and Clark family. *Cases in Clinical Medicine* covers in handbook form the complete range of acute medical conditions and problems that junior doctors are likely to encounter during the first years of training. It is divided into chapters reflecting core medical specialties - including infectious diseases; STD; gastroenterology; etc. Each chapter is then subdivided into case-based problems, such as (for example) pyrexia of unknown origin (under the Infectious Disease Group), HIV/Aids (under STD) and Vomiting and Weight Loss (under Gastroenterology). Each problem follows a standard pattern or template: it begins with a case history, and is accompanied by short, succinct text divided up by headings such as 'What are the commonest causes of...'; 'What factors predispose to...' Where relevant there are also sections on pathology, pathophysiology and prognosis. Important points to note in the acute context are picked out in boxes ('Beware', 'Remember!' and 'Information') as are vital investigations. More than 200 cases Remember! boxes Investigations boxes Information boxes More than 200 cases

The second edition of this book is a practical revision guide for postgraduate students preparing for clinical examinations in internal medicine. Authored by an experienced postgraduate examiner, the book presents a series of short and OSCE cases presented in a uniform format, offering guidance on examination techniques, common mistakes made by candidates, and typical presentation of findings. Divided into seven sections, the book begins with advice on how to

prepare for and pass clinical examinations. The remaining chapters cover cases relevant to different systems of the body - cardiovascular; respiratory; abdominal; neurological; endocrine, rheumatologic, connective tissue and skin; and eye and fundus. Each case provides a summary of diagnosis, differential diagnosis, management, and further information often required in examinations. The questions and model answers are similar to those most frequently encountered in examinations. The comprehensive text is enhanced by illustrations and figures to assist learning and will be useful not only to candidates preparing for postgraduate clinical examinations, but also to undergraduate students. Key points Practical revision guide for postgraduate students preparing for clinical examinations in internal medicine Questions and model answers similar to those encountered in examinations Authored by experienced postgraduate examiner Previous edition (9789386150035) published in 2016 *An Insider's Guide to Cases in Clinical Medicine* CRC Press

**101 Interesting Cases in Clinical Medicine** Saunders Limited.

A new, fully updated edition of Baliga's very popular collection of short cases arranged by clinical area, emphasising the key diagnostic features of clinical conditions as commonly presented in the short-case part of the Final MB and MRCP examinations. Also included are likely instructions or commands expected from the examiner for each condition, and the key points which the candidate must tell the examiner. A must-have for the final-year undergraduate and trainee doctor. From customer reviews of the previous edition: 'This book is the most useful guide that money can buy for the final exams in the current MBChB undergraduate course. It covers important areas of clinical medicine in a question based format and highlights classical scenarios. The questions raised are classical of examiners in the long and short case examinations. This is a must buy for any undergraduate medical student!!!' 'The book is a must during the period that the young doctor or student is on the wards. It allows one to focus on the important physical findings and the relevant clinical pearls associated with the different medical conditions met... It discusses important physical findings and their diagnostic importance. I have found it useful in preparing for attending ward rounds and also for sharpening my clinical skills. The discussion section is well organised such that undergraduates as well as postgraduates can benefit and the material is up to date with good references for further reading.' 'Excellent preparation for finals as well the MRCP

...MUST HAVE before MRCP PACES.'

*Clinical Finals and how to Pass Them*  
Oxford University Press

100 Cases in Clinical Medicine is an indispensable revision tool for medical students preparing for clinical examinations or OSCEs. Using scenarios which mimic daily life, the cases will interest students in clinical problems and help them develop their clinical reasoning skills, with each case presenting details of a patient's medical history and the key findings of a clinical examination, together with initial investigation results for evaluation. Key questions then prompt the student to evaluate the patient, and reach a decision regarding their condition and the possible management plan, while the answer pages will help the student to understand the processes that a clinician goes through in dealing with the problems presented. Contents are organised to provide a quick review of each body system, with a selection of cases relevant to that specific system, then the majority are presented randomly to mimic real life in a GP surgery or emergency department. New to this edition: a review of each body system as well as random cases; new page design with a second colour used throughout; and brought up-to-date with 25% new cases.
