With this first of eight volumes, the eminent economist Fritz Machlup launches his monumental inquiry into the production of knowledge as an economic activity. Volume I presents the conceptual framework for this inquiry and falls into three parts: Types of Knowledge, Qualities of Knowledge, and Knowledge as a Product. Originally published in 1981. The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905.

Volume II of this ten-volume work, examines the parts of intellectual knowledge that have been considered worth teaching in institutions of higher learning. To judge what to teach, it was necessary to classify. Originally published in 1982. Adopting an informational perspective towards knowledge work, this book investigates how enterprise portals can promote knowledge creation, distribution, and use. Moving beyond the design and delivery of portals as mere information retrieval tools, an enterprise portal is viewed as a shared information work space that can facilitate communication and collaboration among organizational workers, as well as support the browsing, searching, and retrieval of information content. Adopting an information vantage point, the book uniquely explores the human issues surrounding enterprise portal adoption and use, as well as the utilization of intelligent agents to ameliorate the use of portals for knowledge-based tasks. The result is a novel, rich and comprehensive discussion on the factors affecting the design and utilization of enterprise portals for knowledge work, suitable for both graduate-level students and organizational workers alike. When The Knowledge-Creating Company (OUP; nearly 40,000 copies sold) appeared, it was hailed as a landmark work in the field of knowledge management. Now, Enabling Knowledge Creation ventures even further into this all-important territory, showing how firms can generate and nurture ideas by using the concepts introduced in the first book. Weaving together lessons from such international leaders as Siemens, Unilever, Skandia, and Sony, along with their own first-hand consulting experiences, the authors introduce knowledge enabling--the overall set of organizational activities that promote knowledge creation--and demonstrate its power to transform an organization's knowledge into value-creating actions. They describe the five key "knowledge enablers" and outline what it takes to instill a knowledge vision, manage conversations, mobilize knowledge activists, create the right context for knowledge creation, and globalize local knowledge. The authors stress that knowledge creation must be more than the exclusive purview of one individual--or designated "knowledge" officer. Indeed, it demands new roles and responsibilities for everyone in the organization--

from the elite in the executive suite to the frontline workers on the shop floor. Whether an activist, a caring expert, or a corporate epistemologist who focuses on the theory of knowledge itself, everyone in an organization has a vital role to play in making "care" an integral part of the everyday experience; in supporting, nurturing, and encouraging microcommunities of innovation and fun; and in creating a shared space where knowledge is created, exchanged, and used for sustained, competitive advantage. This much-anticipated sequel puts practical tools into the hands of managers and executives who are struggling to unleash the power of knowledge in their organization.

With a new preface by the author, this reissue of Thomas Sowell's classic study of decision making updates his seminal work in the context of The Vision of the Anointed, Sowell, one of America's

most celebrated public intellectuals, describes in concrete detail how knowledge is shared and disseminated throughout modern society. He warns that society suffers from an ever-widening gap between firsthand knowledge and decision making—a gap that threatens not only our economic and political efficiency, but our very freedom because actual knowledge gets replaced by assumptions based on an abstract and elitist social vision of what ought to be. *Knowledge and Decisions*, a winner of the 1980 Law and Economics Center Prize, was heralded as a "landmark work" and selected for this prize "because of its cogent contribution to our understanding of the differences between the market process and the process of government." In announcing the award, the center acclaimed Sowell, whose "contribution to our understanding of the process of regulation alone would make the book important, but in reemphasizing the diversity and efficiency that the market makes possible, [his] work goes deeper and becomes even more significant."

Volume III examines in clear and elegant prose the roles of knowledge and information in economics. Part One analyzes the effects of new or uncertain information on market performance; examines the formation and revision of expectations; and provides a classification of literature and an extensive bibliography. Part Two discusses private and social valuations of education and training, the controversy over nature vs. nurture, the issue of "credentialism," and the depreciation of human capital. We are often told that we are "living in an information society" or that we are "information workers." But what exactly do these claims mean, and how might they be verified? In this important methodological study, Alistair S. Duff cuts through the rhetoric to

get to the bottom of the "information society thesis." Wide-ranging in coverage, this study will be of interest to scholars in information science, communication and media studies and social theory. It is a key text for the newly-unified specialism of information society studies, and an indispensable guide to the future of this discipline.

Over the past quarter century, researchers have successfully explored the inner workings of the physical and biological sciences using a variety of social and historical lenses. Inspired by these advances, the contributors to *Social Knowledge in the Making* turn their attention to the social sciences, broadly construed. The result is the first comprehensive effort to study and understand the day-to-day activities involved in the creation of social-scientific and related forms of knowledge about the social world. The essays collected here tackle a range of previously unexplored questions about the practices involved in the production, assessment, and use of diverse forms of social knowledge. A stellar cast of multidisciplinary scholars addresses topics such as the changing practices of historical research, anthropological data collection, library usage, peer review, and institutional review boards. Turning to the world beyond the

academy, other essays focus on global banks, survey research organizations, and national security and economic policy makers. *Social Knowledge in the Making* is a landmark volume for a new field of inquiry, and the bold new research agenda it proposes will be welcomed in the social science, the humanities, and a broad range of nonacademic settings.

Knowledge, Its Creation, Distribution, and Economic Significance: Branches of knowledge Springer Science & Business Media

This book provides a unique set of empirical and theoretical analyses on the conditions, determinants and effects of the exchange and trade of technological knowledge. This work delivered by the research team lead by Bernard Guilhon shows that technological knowledge is more and more traded and exchanged in the market place. When and where contractual interactions are implemented by an institutional set-up which makes the exchange better reliable for both parties. The new evidence provided by the book moreover makes it possible to appreciate the positive role of major knowledge rent externalities provided by the new quasi-markets for technological knowledge. Trade in technological knowledge leads in fact, as the book shows, to higher levels of division of labor, specialization and efficiency in the production and distribution of new technological knowledge. This dynamics is considered a part of a broader process where the generation of technological knowledge is itself becoming closer to the production of goods so that the division of labour among learning organization plays a growing role. Exchange of technological knowledge takes part because the conditions for appropriability are now far better than currently assumed by a large traditional literature. The analysis carried out through the book builds upon the notion of localized technological knowledge and suggests that the exchange of technological knowledge is not a spontaneous 'atmospheric' process.

Social Knowledge Creation in the Humanities Princeton University Press

Written for those interested in the topic of "shared knowledge" in organizations, this edited volume brings together a variety of themes and perspectives that emerge when multidisciplinary scholars examine this important subject. The papers were

presented at a conference designed to bring together behavioral scientists who were interested in the creation, conversation, distribution, and protection of knowledge in organizations. The editors bring together a distinguished group of social psychologists who have made important contributions to social cognition and group processes. They cast a wide net in terms of the topics covered and challenged the authors to think about how their research applies to the management or mismanagement of knowledge in organizations. The volume is divided into three sections: knowledge systems, emotional-motivational systems, and communication and behavioral systems. A final conclusion chapter discusses and integrates the various contributions.

Shared Cognition in Organizations Princeton University Press
Is knowledge an economic good? Which are the characteristics of the institutions regulating the production and diffusion of knowledge? Cumulation of knowledge is a key determinant of economic growth, but only recently knowledge has moved to the core of economic analysis. Recent literature also gives profound insights into events like scientific progress, artistic and craft development which have been rarely addressed as socio-economic institutions, being the domain of sociologists and historians rather than economists. This volume adopts a multidisciplinary approach to bring knowledge in the focus of attention, as a key economic issue.

In the humanities, the field of "social knowledge creation" has helped define how social media platforms and other collaborative spaces have shaped humanistic critique in the twenty-first century. The ability to access and organize information and people has been profoundly liberating in some online contexts, but social media also presents many issues which come to light in the often-overlapping domains of politics, media studies, and disinformation. While these countervailing influences are all around us, the essays collected in this volume represent a humanistic ethics of generosity, compassion, and care. Social knowledge creation refreshingly returns to humanist values,

emphasizing that people matter more than networks, facts matter more than opinion, and ideas matter more than influence. As a result, the speed and scale of digital culture has challenged humanists from many disciplines to more clearly define the values of education, collaboration, and new knowledge in pursuit of human justice and equality. In short, online culture has presented a new opportunity to define how and why the humanities matter in the age of social media.

[The Branches of Learning Knowledge: Its Creation, Distribution and Economic Significance, Volume I](#)

Scholars in the science and technology field have not collectively questioned, much less proposed, an agenda for policy makers. Now is an appropriate time for such an undertaking. First, there is a growing belief that the U.S. national research and development system, like that of many industrial nations, is changing due to global competitive pressures and advancements in information technology and electronic commerce. Second, industry's R&D relationship with the academic research community is changing not only because of the global competition but also because of alterations in the level of government support of fundamental research. As a result, policy makers will need to rethink their approaches to science and technology issues. This volume is a collection of essays by scholars about innovative policy in the knowledge-based economy. By knowledge-based economy we

mean one for which economic growth is based on the creation, distribution, and use of technology. As such, innovation policy in such an economy must enhance the creation, distribution, and use of knowledge that leads to the creation, distribution, and use of technology. This volume considers elements of an innovation policy: innovation policy and academic research, innovation policy in electronic commerce, and innovation policy and globalization issues.

For knowledge management to be successful, the corporate culture needs to be adapted to encourage the creation, sharing, and distribution of knowledge within the organization. *Knowledge Organizations: What Every Manager Should Know* provides insight into how organizations can best accomplish this goal. Liebowitz and Beckman provide the information companies need for evaluating and planning the steps and processes that will transform their existing organization infrastructure into a "knowledge-based" organization. This easy-to-read guide includes many vignettes, examples, and short cases of organizations involved in knowledge management.
