The 'e-revolution' that has swept the higher and further education sector over the last decade is now starting to make a real impact in school level teaching and learning around the world. There is a rapidly growing interest in, and demand for open and distance learning solutions for schools, not only in terms of improving access (for example, for the children of travellers, or for those in geographically remote areas) but also in terms of improving pedagogy for more 'conventional' teaching, by offering teachers, parents and pupils greater support and access to learning materials and resources. This ground-breaking book, with contributions from around the world including the UK, US, New Zealand, Canada and India, looks at the key areas of development in this new field, provides best practice examples and inspiring case studies and will increase the awareness of the opportunities and challenges in this potentially huge field.

Assessing the Generic Outcomes of College Test Prep Books

Online learning has increasingly been viewed as a possible way to remove

barriers associated with traditional face-to-face teaching, such as overcrowded classrooms and shortage of certified teachers. While online learning has been recognized as a possible approach to deliver more desirable learning outcomes, close to half of online students drop out as a result of student-related, course-related, and out-of-school-related factors (e.g., poor self-regulation; ineffective teacher-student, student-student, and platform-student interactions; low household income). Many educators have expressed concern over students who unexpectedly begin to struggle and appear to fall off track without apparent reason. A well-implemented early warning system, therefore, can help educators identify students at risk of dropping out and assign and monitor interventions to keep them on track for graduation. Despite the popularity of early warning systems, research on their design and implementation is sparse. Early Warning Systems and Targeted Interventions for Student Success in Online Courses is a cutting-edge research publication that examines current theoretical frameworks, research projects, and empirical studies related to the design, implementation, and evaluation of early warning systems and targeted interventions and discusses their implications for policy and practice. Moreover, this book will review common challenges of early warning systems and dashboard design and will explore design principles and data visualization tools to make data more understandable and, therefore, more actionable. Highlighting a range of topics such as curriculum design, game-based learning, and learning support, it is ideal for academicians, policymakers, administrators, researchers, education

professionals, instructional designers, data analysts, and students.
