*The Parinama Method* Macmillan Higher Education

An integrated language arts approach to literacy development that brings early childhood perspectives on how children learn in pre-kindergarten through grade three, together with explicit teaching of literacy skills and strategies teachers need to make it all work. Pre-service and in-service teachers get a wealth of valuable information for making children active participants in the process of literacy development with this integrated approach to language arts. The book encourages teaching reading, writing, listening, thinking, and viewing at the same time, using each skill to develop the others, and discusses both constructivist problem-

solving teaching and more explicit systematic instruction.

Through both theoretical and research-based rationales, plus extensive practical applications, renowned author Lesley Mandel Morrow presents literacy development as an active process between children and adults to create meaning and real purpose—and helps pre- and in-service teachers grasp the scope and complexity of early literacy development. This comprehensive, balanced approach to literacy teaching and learning covers oral language development, word study, phonological awareness, phonics, comprehension, listening and writing. The reader is provided with a complete picture of early literacy development.

**Rutter's Child and Adolescent Psychiatry** Elsevier Health Sciences

*Who Am I in the Lives of Children*, ninth edition presents a constructivist, developmental approach to the full range of early

childhood education and care programs. Its practical orientation, personal voice, appealing photographs, and numerous stories and examples set it apart. Because of its emphasis on respecting and honoring the individual child, values and ethics, and the personal and professional development of teachers of young children, it has become one of most well-respected books in the field.

Educators in child-centered programs are encouraged to begin with children as they are and focus on getting to know each individual's strengths, interests, challenges, and circumstances. They then support each child in growing and learning in ways that are in harmony with who they are, rather than according to a predetermined plan.

Adolescence is beginning with the onset of puberty and ending in the mid-20s is a critical period of development during which key areas of the brain mature and develop. These changes in brain structure, function, and connectivity mark adolescence as a period of opportunity to discover new vistas, to form relationships with peers and adults, and to explore one's developing identity. It is also a period of resilience that can ameliorate childhood setbacks and set the stage for a thriving trajectory over the life course. Because adolescents comprise nearly one-fourth of the entire U.S. population, the nation needs policies and practices that will better leverage these developmental opportunities to harness the promise of adolescence rather than focusing myopically on containing its risks. This report examines the neurobiological and socio-behavioral science of adolescent development and outlines how this knowledge can be applied, both to promote adolescent well-being, resilience, and development, and to rectify structural barriers and inequalities in opportunity, enabling all adolescents to flourish.
