emerging hardware trend. Two trends in the data center hardware market continue to evolve. First, as the big hardware manufacturers consolidate, smaller vendors are taking their place in the converged, hyperconverged and virtualization segments by offering more comprehensive vs. standalone solutions. Second, storage is evolving. Big data, data center and services trends in 2017 According to the IDC, several factors are leading to a decline in data centers. The total number of data centers will peak at 8.6 million in 2017. From there, the number will decline as more and more companies will move data center operations from on-premise facilities to 'mega data centers' run by service providers.
