What Can Parents Do?

Cambridge Scholars

Criminal Recidivism

intends to fill a gap in the criminological psychology literature by examining the processes underlying persistent criminal careers. This book aims to investigate criminal recidivism, and why, how and for how long an individual continues to commit crimes, whilst also reviewing knowledge about risk assessment and the role of psychopathy (including neurocriminological factors) in encouraging recidivism. It also focuses on the recidivism of sex offenders and on what works in reducing reoffending. At an empirical level, this book attempts to explain criminal persistence and recidivism using longitudinal data from the Cambridge Study in Delinquent Development (CSDD). At a psycho-criminological level it joins

together quantitative and qualitative analyses, making its content a practical guide to explain, predict, and intervene to reduce the risk of criminal recidivism. The authors present quantitative analyses of criminal careers, as well as qualitative life histories of chronic offenders, in order to bring home the reality and consequences of a life of crime. The book is aimed not only at advanced students and academics in psychology, criminology, probation studies, social sciences, psychiatry, sociology, political science, and penology, but also at decision makers, policy officials, and practitioners within the realm of crime intervention and prevention, and also at forensic experts, judges and lawyers.

A Case Study Approach to Issues and Interventions

Cambridge University
Press

The process of emotional attachment, a critical factor in infant and child development, is now recognized as an important component of

satisfying adult relationships. Building on the research and theories of developmental psychologists, ethologists, and social scientists, this ground-breaking book describes the characteristics and role of attachment in the adult years and presents new perspectives for understanding and changing an adult's ability to form life-enhancing personal relationships. Chapters provide methods for applying ideas about adult attachments to social research and clinical intervention, defining attachment for adults with supporting research and clinical evidence, explicating the varieties of attachment patterns for adults, and for demonstrating the clinical and therapeutic relevance of these constructs. This book is aimed at developmental psychologists, clinicians, and social scientists in psychiatry, psychology, and related mental health disciplines. Also an appropriate text for theoretical and clinical courses in psychiatry, psychology, and social

work.

**The Structure of
Attachment in
Adolescent Offenders**

Routledge
In recent years research
on parenting has changed
stance from one where
parents shape child
outcomes to an

interactive perspective.
However this shift is only
now transferring to
adolescents, with
research exploring how
the roles that adolescents
and parents play in their
interactions can lead to
problem behaviour. Part
of the Hot Topics in
Developmental Research
series, this book presents
the new perspective.

the landmark
Psychotherapy
Relationships That Work
broke new ground by
focusing renewed and
corrective attention on
the substantial research
behind the crucial (but
often overlooked) client-
therapist relationship.
This thoroughly revised
edition brings a decade of
additional research to the
same task. In addition to
updating each chapter,
the second edition

features new chapters on the effectiveness of the alliance with children and adolescents, the alliance in couples and family therapy, real-time feedback from clients, patient preferences, culture, and attachment style. The new edition provides "two books in one"--one on evidence-based relationship elements and one on evidence-based methods of adapting treatment to the individual patient. Each chapter features a specific therapist behavior that improves treatment outcome, or a transdiagnostic patient characteristic (such as reactance, preferences, culture, stage of change) by which clinicians can effectively tailor psychotherapy. All chapters provide original, comprehensive meta-analyses of the relevant research; clinical examples, and research-supported therapeutic practices by distinguished contributors. The result is a compelling synthesis of the best available research, clinical expertise, and patient characteristics in the tradition of evidence-based practice. The second edition of *Psychotherapy Relationships That Work:*

The book provides guidelines and practical creative exercises which equip creatives major students as well as creative practitioners with fundamental knowledge on creation methods. Combination of functionality, simplicity and aesthetics in modern design is considered a fundamental design principle in the Bauhaus School in Germany, and, inspired by the School, the creative handcrafting exercises and the concepts introduced in this book are primarily coherent with this principle. The book draws a direction between two and three dimensional material-based design and modern digital creation process. The first part of the book introduces various creative handcrafting exercises on proportion, geometry and modularity, among other fundamental design principles. The creative exercises will sensitize students on aesthetical and structural issues, and thus serve as an essential building block for application of the design principles to computer-based creative

processes, which are introduced in the second part of the book. Published by City University of Hong Kong Press. 0000000000000000
