Rowan's Primer of EEG E-Book Jaypee Brothers Medical Publishers
 An engagingly written text that bridges the gap between neuroanatomy and clinical neurology "A wonderfully readable, concise, but by no means superficial book that fits well in the current pedagogic

environment." From the Foreword by Allan H. Ropper, MD Clinical Neurology and Neuroanatomy delivers a clear, logical discussion of the complex relationship between neuroanatomical structure and function and neurologic disease. Written in a clear, concise style, this unique text offers a concise overview of fundamental neuroanatomy and the clinical localization principles necessary to diagnose and treat patients with neurologic diseases and disorders. Unlike other neurology textbooks that either focus on neuroanatomy or clinical neurology, Clinical Neurology and Neuroanatomy integrates the two in manner which simulates the way neurologists learn, teach, and think. Clinical Neurology and Neuroanatomy is divided into two main sections. In Part 1, clinically relevant neuroanatomy is presented in clinical context in order to provide a framework for neurologic localization and differential diagnosis. The diseases mentioned in localization-based discussions of differential diagnosis in Part 1 are then discussed in clinical detail with respect to their diagnosis and management in Part 2. Part 1 can therefore be consulted for a neuroanatomical localization-based approach to symptom evaluation, and Part 2 for the clinical features, diagnosis, and management of neurologic diseases.

FEATURES • A clear, concise approach to explaining the complex relationship between neuroanatomical structure and function and neurologic disease • Numerous full-color illustrations and high resolution MRI and CT scans • Explanatory tables outline the clinical features, characteristics, and differential diagnosis of neurologic diseases and disorders

Neurotrauma refers to an injury to the brain or the spinal cord. It includes the degeneration or destruction of brain cells that often leads to serious medical conditions such as paralysis, brain damage and death. The symptoms of neurotrauma vary, based on the severity of the brain injury. Mild brain injury often causes headaches, confusion, fatigue and tinnitus. Moderate and severe brain injuries include symptoms such as slurred speech, coma, nausea, convulsions and abnormal dilation of the eyes. The medical field which provides critical care in life threatening conditions related to the nervous system is known as neurocritical care or neurointensive care. Some of the procedures which are used in neurocritical care are hypothermia, intracranial pressure management and basic life

support monitoring. This book presents researches and studies performed by experts across the globe. It provides comprehensive insights into neurotrauma and critical care of the brain. This book will serve as a valuable source of reference for graduate and post graduate students.
