The field of management education and research has become an industry of its own an industry with fierce international competition in a global arena. Here, the authors argue that a series of mechanisms has led to mimicking and thus strategic convergence among business schools. The authors further argue that this has resulted in a loss of relevance and diversity of the management knowledge produced and taught in a multipolar world. They view this as counterproductive to business schools, students, firms, societies and other stakeholders, including scholars themselves. Based in part on the work of SFM (Société Française de Management the French Academy of Management), the authors of this volume endeavour to engage in strategic conversations with stakeholders in an effort to reshape the field of management studies. Redesigning Management Education and

Research revisits the foundations of management research and education, suggests ways to redesign the content taught to better fit the needs of firms and society at large, and proposes actions and concrete examples of what could be done to restructure the institutional setting of the field of management. This book calls for collective strategies from management scholars to influence some of the de facto regulation mechanisms that have appeared over recent years, such as business school rankings and the race for publication in a narrow list of academic journals. This book is also a plea for working on those issues beyond the specificities of national contexts to encompass a broader regional perspective in order to reshape the rules of the game in management education and research. Teachers, researchers and deans, as well as practitioners from all areas of business will find this volume illuminating. It offers an ambitious vision and a practical framework aimed squarely at remaking management education and research to be relevant to the demands of the twenty-first century.

The classic personal account of Watson and Crick's groundbreaking discovery of the structure of DNA, now with an introduction by Sylvia Nasar, author of *A Beautiful Mind*. By identifying the structure of DNA, the molecule of life, Francis Crick and James Watson revolutionized biochemistry and won

themselves a Nobel Prize. At the time, Watson was only twenty-four, a young scientist hungry to make his mark. His uncompromisingly honest account of the heady days of their thrilling sprint against other world-class researchers to solve one of science's greatest mysteries gives a dazzlingly clear picture of a world of brilliant scientists with great gifts, very human ambitions, and bitter rivalries. With humility unspoiled by false modesty, Watson relates his and Crick's desperate efforts to beat Linus Pauling to the Holy Grail of life sciences, the identification of the basic building block of life. Never has a scientist been so truthful in capturing in words the flavor of his work.

The relationship between feminism and ecology has grown in importance in recent years. This book provides a comprehensive introduction to the ecofeminist movement and its history, as well as an extended analysis of the main perspectives within it. Mellor examines the connections between feminism and the green movement, and outlines the contributions of the major participants, while contextualizing them within a wider range of debates. She re-examines classic feminist texts from an ecofeminist perspective, and explores the relationship between ecofeminism and other ecological movements, such as 'deep' ecology, social ecology and ecosocialism. Mellor discusses the association of women with biology and 'nature', and argues that the relationship between women and the environment can help us to understand the relationship between humanity and the natural world. Against the trends towards radical economic liberalism, global capitalism and postmodernist pluralism, she argues that there is within the feminist and green movements the

basis of a new radical movement which draws on the principles of both. A useful and engaging account of feminist perspectives on ecology, the book will be welcomed by students and researchers in feminism and gender studies, sociology and political theory.
