Physical-Chemical Properties of Foods eBook by Aïchatou ... HYDROGEN ION CONCENTRATION (PH) □ The acidity and alkalinity is of great importance in food processing. □ Fruits contains organic acid and have an acid reaction while foods such as milk and eggs have neutral reaction. □ The term

hydrogen ion concentration is used to express the degree of acidity or alkalinity of a food or a given solution. Physicochemical properties of food - SlideShare Physical-Chemical Properties for Food Quality & Function This group employs the basic principles and instrumental techniques of the physical and chemical sciences to improve our understanding of complex food systems, thus enabling the production of longer lasting, higher quality, and safer foods. Physical-Chemical Properties for Food Quality & Function ... The pH is an indicator of the amount of acid or base present in a food. For canned foods, a pH of 4.6 or lower would prevent microorganisms such as *Clostridium botulinum* to grow if proper sterilization time and temperature are used. The pH also affects flavor, color and texture. The pH is measured using a pH meter.
