The Rapid Visual Screening (RVS) handbook can be used by trained personnel to identify, inventory, and screen buildings that are potentially seismically vulnerable. The RVS procedure comprises a method and several forms that help users to quickly identify, inventory, and score buildings according to their risk of collapse if hit by major earthquakes. The RVS handbook describes how to identify the structural type and key weakness characteristics, how to complete the screening forms, and how to manage a successful RVS program.

Land Rover Discovery, 1989-1998 Springer Nature

From 1980 to 2000, Camel Trophy took more than 500 amateur competitors from 35 countries on extraordinary and challenging adventures. On most of these events, teams drove specially prepared Land Rovers to the limit and beyond in locations as varied as Borneo, Mongolia, Papua New Guinea and Tanzania. Camel Trophy charts the history of the event and tells the incredible stories resulting from the constant challenge to both man and machine.. As one of the official photographers on the

last four events, author Nick Dimbleby's first-hand account, the shared experiences of competitors, along with contemporary reports and extensive new interviews of key event leaders, all combine to make Camel Trophy a gripping tale of adventure, adversity, technological change and logistical challenge. Illustrated with a stunning collection of photographs including never-before-published, behind-the-scenes shots, this meticulously researched publication can legitimately claim to be the definitive history of the Camel Trophy.

Getting a Rover K-Series engine properly up and running can be a difficult task, but ultimately the result is always worthwhile. Illustrated with over 300 photographs, Rover K-Series Engine - Maintenance, Repair and Modification is a practical guide to keeping these unique engines in fine working order. The most well-known issue with the K-Series is the head gasket, and this book demonstrates how to identify common faults, before giving practical advice on how best to solve them. Step-by-step guidance on all aspects of long-term engine maintenance is provided, in addition to the improvements required to prevent further problems. A K-Series engine is then stripped down to examine its clever and interesting structure, and is rebuilt with improvements. Authors of over twenty automotive books and countless articles in assorted motoring magazines, Iain Ayre and Rob Hawkins have combined their knowledge to bring you this book on the Rover K-Series engine, which is fully illustrated with 356 colour photographs.

Invasive non-native species are a major threat to global biodiversity. Often introduced accidentally through international travel or trade, they invade and colonize new habitats, often with devastating consequences for the local flora and fauna. Their environmental impacts can range from damage to resource production (e.g. agriculture and forestry) and infrastructure (e.g. buildings, road and water supply), to human health. They consequently can have major economic impacts. It is a priority to prevent their introduction and spread, as well as to control them. Freshwater ecosystems are

particularly at risk from invasions and are landscape corridors that facilitate the spread of invasives. This book reviews the current state of knowledge of the most notable global invasive freshwater species or groups, based on their severity of economic impact, geographic distribution outside of their native range, extent of research, and recognition of the ecological severity of the impact of the species by the IUCN. As well as some of the very well-known species, the book also covers some invasives that are emerging as serious threats. Examples covered include a range of aquatic and riparian plants, insects, molluscs, crustacea, fish, amphibians, reptiles and mammals, as well as some major pathogens of aquatic organisms. The book also includes overview chapters synthesizing the ecological impact of invasive species in fresh water and summarizing practical implications for the management of rivers and other freshwater habitats.
