SAP Warehouse Management SAP PRESS  
 Inhaltsangabe: Abstract: The implementation of an Enterprise Resource Planning (ERP) system refers to Information Systems, Business Processes, and People. Basically, it is a changing procedure in organizations that strive for company-wide high performance. Business Process Transformation is about changing a company's focus - from products to customers. Information Systems are replaced by a homogenous system environment which integrates all information into a common system. The behaviour and skills of the company-wide personnel are adapted to perform in the new "world". The big challenge of the implementation is to have the properly-

trained people for a high-performance organization. Unfortunately, most companies do not recognize that need. They underestimate the impact that the human factor has on an ERP approach; they consider the implementation as a software-installation with influence to the business. But, the implementation is much more complex. This thesis is dedicated to all those persons who intend to implement an Enterprise Resource Planning system, and who want to understand the theory of Business Process Transformation and how it is linked to Enterprise Resource Planning. To emphasize the importance of the human factors within the implementation, chapter 4 elaborates on End-User Training as a significant part of an implementation for a company dedicated to becoming a high-performance organization. This paper also includes a case study of an ERP implementation at Mitel Corporation. The

case study presents information about the Company, its ERP implementation, and its approach to End-User Training.

SAP® MM Questions and Answers SAP PRESS

Although tens of thousands of global users have implemented Systems, Applications, and Products (SAP) for enterprise data processing for decades, there has been a need for a dependable reference on the subject, particularly for SAP materials management (SAP MM). Filling this need, The SAP Materials Management Handbook provides a complete understanding of how to best configure and implement the SAP MM module across various types of projects. It uses system screenshots of real-time SAP environments to illustrate the complete flow of business transactions involved with SAP MM. Supplying detailed explanations of the steps involved, it presents case studies from actual projects that demonstrate how to convert theory into powerful SAP MM solutions. Includes tips on the customization required for procurement of materials and inventory management Covers the range of business scenarios related to SAP MM, including the subcontracting cycle and consignment cycle Provides step-by-step guidance to help you implement your own SAP MM module Illustrates the procure to pay lifecycle Depicts critical business flows with screenshots of real-time SAP environments This much-needed reference explains how to use the SAP MM module to take care of the range of business functions related to purchasing, including purchase orders, purchase requisitions, outline contracts, and request for quotation. It also examines all SAP MM inventory management functions such as physical inventory, stock overview, stock valuation, movement types, and reservations—explaining how SAP MM can be used to define and maintain materials in your systems.
