DICKERSON RIVAS

On Learning from Las Vegas University of Toronto Press
 The world of things is different now from what it was half a century ago, but Rene Dubos doubts that there have been basic changes in life itself, in those attitudes and activities, needs, and yearning, that are the most important for happiness and suffering, for hope and despair the differences between humanity and animality. Sophisticated and civilized as we may be, we have retained from our distant ancestors the ability to derive profound satisfaction from the small happenings of daily life. *Beast or Angel?* attempts to trace the origins of needs and yearnings that have always been those of humankind everywhere and always. In this search, Dubos expresses the same concerns and uses the same words when speaking of the past, the present, or the future the reason being that the biological and psychological characteristics of humankind have remained essentially the same for at least fifty millennia. We are human to the extent that we live according to certain principles which have a human quality. This quality has emerged and continues to emerge from the

choices that we make throughout our individual lives and that humankind has made from the beginning of its existence. To be human is to be able and willing to choose among the options that are offered to the human species by the natural order of things. This book examines human species, not only on the basis of the biological and psychological attributes it shares with animal species, but more by identifying its choices throughout pre-history and history.

In *The Place of the Viewer*, Kerr Houston offers a richly detailed chronological overview of art historians' evolving attempts to account for the physical position of the viewer in discussing works of art.

The Embodied Beholder in the History of Art, 1764-1968
 BRILL

Studies in Hellenistic Architecture is a detailed analysis of the development of the major building-types of the Hellenistic age - the mid-fourth century B.C. to the time of the Roman conquest of

the Eastern Mediterranean. In this meticulous work, Frederick E. Winter reveals how the architects of the period went beyond anything achieved by their Classical Greek predecessors, and how these impressive skills prepared the way for many of Rome's later architectural achievements. Geographically, the monuments included in this volume extend from Spain to Afghanistan and from Provence to North Africa. Winter discusses the architectural achievements of the various regional styles of the Eastern Mediterranean, and takes a detailed look at Hellenistic developments west of the Adriatic. While the interrelationship of these regional developments is often unclear, especially in cases where there are no explicit criteria for dating, Winter makes excellent use of the advance in scholarship over the past fifty to sixty years, offering the first real attempt at a synthesis of this vast subject. *Studies in Hellenistic Architecture* is an invaluable resource, containing a wealth of illustrations of the various types of Hellenistic building and the most comprehensive scholarship to date on the topic.

Choosing to be Human Routledge

The Theory of Architecture Concepts, Themes & Practices Paul-Alan Johnson Although it has long been thought that theory directs architectural practice, no one has explained precisely how the connection between theory and practice is supposed to work. This guide asserts that architectural theory does not direct practice, but is itself a form of reflective practice. Paul-Alan Johnson cuts through the jargon and mystery of architectural theory to clarify how it relates to actual applications in the field. He also reveals the connections between new and old ideas to enhance the reader's powers of critical evaluation. Nearly 100 major concepts, themes, and practices of architecture—as well as the rhetoric of architects and designers—are presented in an easily accessible format. Throughout, Johnson attempts to reduce each architectural notion into its essential concept. By doing so, he makes theory accessible for everyday professional discussion. Topics are arranged under ten headings: identification, definition, power, attitudes, ethics, order, authority, governance, relationship, and expression. Areas covered under these headings include: * Utopic thought in theories of architecture * Advocacy and citizen participation in architecture * The basis of architectural quality and excellence * The roles of the architect as artist, poet, scientist, and technologist * Ethical obligations of architecture * Rationales for models and methods of design * How authority is determined in architecture * How architects structure their concepts * Conventions of communication within the architectural profession Each section begins by showing the etymology of key terms of the topic discussed, along with a summary history of the topic's use in architecture. Discussions probe the conceptual and philosophical difficulties of different theories, as well as their potential and limitations in past and present usage. Among the provocative issues discussed in terms of their relationship to architecture are chaos theory, feminism, service to the community, and the use of metaphor. Johnson points out with stunning clarity the intentions as well as the contradictions and inconsistencies of all notions and concepts. All architects and designers, as well as students and teachers in these disciplines, will gain many insights about architectural thought in this groundbreaking text.

Architectural Space in Ancient Greece Cambridge University Press In this book, Tsiambaos redefines the ground-breaking theory of Greek architect and town planner Constantinos A. Doxiadis (*The Form of Space in Ancient Greece*) and moves his thesis away from antiquity and ancient architecture, instead arguing that it can only be understood as a theory founded in modernity. In light of this, the author explores Doxiadis' theory in relation to the work of the controversial Greek architect Dimitris Pikionis. This

parallel investigation of the philosophical content of Doxiadis' theory and the design principles of Pikionis' work establishes a new frame of reference and creates a valuable and original interpretation of their work. Using innovative cross-disciplinary tools and methods which expand the historical boundaries of interwar modernism, the book restructures the ground of an alternative modernity that looks towards the future through a mirror that reflects the ancient past. *From Doxiadis' Theory to Pikionis' Work: Reflections of Antiquity in Modern Architecture* is fascinating reading for all scholars and students with an interest in modernism and antiquity, the history and theory of architecture, the history of ideas and aesthetics or town planning theory and design.

Architecture and Mathematics from Antiquity to the Future UCL Press

This book presents the proceedings of the 18th International Conference on Graphic Design in Architecture, EGA 2020, focusing on heritage – including architectural and graphic heritage as well as the graphics of heritage. The third of three volumes, this book discusses topics related to mapping, cartography and landscape, as well as innovative education methods, particularly in the context of teaching architectural heritage. It covers historical cartography and new cartographies, as well as methods for representing the landscape, and reports on different learning methods and practices, including classroom methods but also those involving more active participation and multidisciplinary and collaborative production. Given its scope, this book will appeal cartographers, designers and teachers, providing them with extensive information on innovative methodologies and a source of inspiration for their future work.

Architectural Space in Ancient Greece Routledge

Architecture for the Poor describes Hassan Fathy's plan for building the village of New Gurna, near Luxor, Egypt, without the use of more modern and expensive materials such as steel and concrete. Using mud bricks, the native technique that Fathy learned in Nubia, and such traditional Egyptian architectural designs as enclosed courtyards and vaulted roofing, Fathy worked with the villagers to tailor his designs to their needs. He taught them how to work with the bricks, supervised the erection of the buildings, and encouraged the revival of such ancient crafts as *claustra* (lattice designs in the mudwork) to adorn the buildings.

Water Management in Ancient Greek Cities John Wiley & Sons Learning from Las Vegas, originally published by the MIT Press in 1972, was one of the most influential and controversial architectural books of its era. Thirty-five years later, it remains a perennial bestseller and a definitive theoretical text. Its authors—architects Robert Venturi, Denise Scott Brown, and Steven Izenour—famously used the Las Vegas Strip to argue the virtues of the "ordinary and ugly" above the "heroic and original" qualities of architectural modernism. Learning from Las Vegas not only moved architecture to the center of cultural debates, it changed our ideas about what architecture was and could be. In this provocative rereading of an iconic text, Aron Vinegar argues that Learning from Las Vegas is not only of historical interest but of absolute relevance to current critical debates in architectural and visual culture. Vinegar argues that to read Learning from Las Vegas only as an exemplary postmodernist text—to understand it, for example, as a call for pastiche or as ironic provocation—is to underestimate its deeper critical and ethical meaning, and to miss the underlying dialectic between skepticism and the ordinary, expression and the deadpan, that runs through the text. Vinegar's close attention to the graphic design of Learning from

Las Vegas, and his fresh interpretations of now canonical images from the book such as the Duck, the Decorated Shed, and the "recommendation for a monument," make his book unique. Perhaps most revealing is his close analysis of the differences between the first 1972 edition, designed for the MIT Press by Muriel Cooper, and the "revised" edition of 1977, which was radically stripped down and largely redesigned by Denise Scott Brown. The dialogue between the two editions continues with this book, where for the first time the two versions of Learning from Las Vegas are read comparatively.

Architectural Space in Ancient Greece Routledge

From the myth of Arcadia through to the twenty-first century, ideas about sustainability – how we imagine better urban environments – remain persistently relevant, and raise recurring questions. How do cities evolve as complex spaces nurturing both urban creativity and the fortuitous art of discovery, and by which mechanisms do they foster imagination and innovation? While past utopias were conceived in terms of an ideal geometry, contemporary exemplary models of urban design seek technological solutions of optimal organisation. The Venice Variations explores Venice as a prototypical city that may hold unique answers to the ancient narrative of utopia. Venice was not the result of a preconceived ideal but the pragmatic outcome of social and economic networks of communication. Its urban creativity, though, came to represent the quintessential combination of place and institutions of its time. Through a discussion of Venice and two other works owing their inspiration to this city – Italo Calvino's *Invisible Cities* and Le Corbusier's *Venice Hospital* – Sophia Psarra describes Venice as a system that starts to resemble a highly probabilistic 'algorithm', that is, a structure with a small number of rules capable of producing a large number of variations. The rapidly escalating processes of urban development around our big cities share many of the motivations for survival, shelter and trade that brought Venice into existence. Rather than seeing these places as problems to be solved, we need to understand how urban complexity can evolve, as happened from its unprepossessing origins in the marshes of the Venetian lagoon to the 'model city' that endured a thousand years. This book frees Venice from stereotypical representations, revealing its generative capacity to inform potential other 'Venices' for the future.

Dictionary of Architecture and Building Construction

Walter de Gruyter

Montage has been hailed as one of the key structural principles of modernity, yet its importance to the history of modern thought about cities and their architecture has never been adequately explored. In this groundbreaking new work, Martino Stierli charts the history of montage in late 19th-century urban and architectural contexts, its application by the early 20th-century avant-gardes, and its eventual appropriation in the postmodern period. With chapters focusing on photomontage, the film theories of Sergei Eisenstein, Mies van der Rohe's spatial experiments, and Rem Koolhaas's use of literary montage in his seminal manifesto *Delirious New York* (1978), Stierli demonstrates the centrality of montage in modern explorations of space, and in conceiving and representing the contemporary city. Beautifully illustrated, this interdisciplinary book looks at architecture, photography, film, literature, and visual culture, featuring works by artists and architects including Mies, Koolhaas, Paul Citroen, George Grosz, Hannah Höch, El Lissitzky, and Le Corbusier.

Yale University Press

Colors are an element of both the natural and the man-made environments. They convey messages of all kinds and perform a wide variety of functions, informing, organizing, warning. But

they also serve an aesthetic purpose, affecting the statement, effect, and acceptance of objects and spaces. While people's reactions to color vary widely, in design questions it is still possible to establish generally valid color concepts to match the expectations of the various groups of users. This book offers a guide based on a wide range of scientific findings and may be consulted as an authoritative reference by the architecture student and the professional alike. The three editors, Dr. B. Rodeck, Prof. G. Meerwein, and F. H. Mahnke have taught for many years at the Salzburger Seminare für Farbe und Umwelt der IACC.

Body, Memory, and Architecture Birkhäuser

Looks at the development of urban design, focusing on four elements: the physical dimension of monuments and spaces, and the humanist dimension of patterns and narrative in cities.

Obsolescence and Opportunities Oxford University Press, USA

The relationship between public and private spheres is one of the key concerns of the modern society. This book investigates this relationship, especially as manifested in the urban space with its social and psychological significance. Through theoretical and historical examination, it explores how and why the space of human societies is subdivided into public and private sections. It starts with the private, interior space of the mind and moves step by step, through the body, home, neighborhood and the city, outwards to the most public, impersonal spaces, exploring the nature of each realm and their complex, interdependent relationships. A stimulating and thought provoking book for any architect, architectural historian, urban planner or designer.

Modernism and the Professional Architecture Journal Routledge

This provocative collection of essays is the first book-length treatment of the development of modern architecture in the Middle East. Ranging from Jerusalem at the turn of the twentieth century to Libya under Italian colonial rule, postwar Turkey, and on to present-day Iraq, the essays cohere around the historical encounter between the politics of nation-building and architectural modernism's new materials, methods, and motives. Architecture, as physical infrastructure and as symbolic expression, provides an exceptional window onto the powerful forces that shaped the modern Middle East and that continue to dominate it today. Experts in this volume demonstrate the political dimensions of both creating the built environment and, subsequently, inhabiting it. In revealing the tensions between achieving both international relevance and regional meaning, Modernism in the Middle East affords a dynamic view of the ongoing confrontations of deep traditions with rapid modernization. Political and cultural historians, as well as architects and urban planners, will find fresh material here on a range of diverse practices.

The Language of Architecture Oxford University Press on Demand

Focusing on the Mediterranean area where water management is crucial, this pioneering study is the first to show how the supply, distribution, and drainage of water contributed to the urbanization of ancient cities. Drawing from classical archaeology, the theory and history of urbanization, geology, and hydraulic engineering, Crouch examines water-system elements, including springs, fountains, wells, channels and drains, latrines, laundry, and dishwashing, as they relate to each other and to the physical, historical, and social bases of ancient Greek cities. Studying numerous sites including Pompeii, Pergamon, Athens, Samos, Delphi, and Corinth, she concludes that increased knowledge and skill in management of water contributed directly to the urbanization of the ancient Greek world. Illustrated with excellent photographs and line drawings, the discussions of supply, distribution, and drainage of water are organized topically, rather than chronologically or by site, offering an

excellent example of the interdisciplinary approach. Crouch's study raises stimulating questions for further research, indicates entirely new directions for established academic disciplines, and suggests useful procedures for modern cities facing problems of water supply and management.

[Architecture for the Poor](#) Mit Press

The Oxford Encyclopedia of Ancient Greece and Rome is the clearest and most accessible guide to the world of classical antiquity ever produced. This multivolume reference work is a comprehensive overview of the major cultures of the classical Mediterranean world--Greek, Hellenistic, and Roman--from the Bronze Age to the fifth century CE. It also covers the legacy of the classical world and its interpretation and influence in subsequent centuries. The Encyclopedia brings the work of the best classical scholars, archaeologists, and historians together in an easy-to-use format. The articles, written by leading scholars in the field, seek to convey the significance of the people, places, and historical events of classical antiquity, together with its intellectual and material culture. Broad overviews of literature,

history, archaeology, art, philosophy, science, and religion are complimented by articles on authors and their works, literary genres and periods, historical figures and events, archaeologists and archaeological sites, artists and artistic themes and materials, philosophers and philosophical schools, scientists and scientific areas, gods, heroes, and myths. Areas covered include:

- Greek and Latin Literature · Authors and Their Works · Historical Figures and Events · Religion and Mythology · Art, Artists, Artistic Themes, and Materials · Archaeology, Philosophers, and Philosophical Schools · Science and Technology · Politics, Economics, and Society · Material Culture and Everyday Life

Volume I: Antiquity to the 1500s Routledge

Covers all periods of western architectural history including biographies of architects and others who have made significant contributions to the field of architecture.

Environmental Problems of the Greeks and Romans UCL Press

Traces the significance of the human body in architecture from its early place as the divine organizing principle to its present near elimination
