 InfoTech being any technology that moves or manages voice, data or video - whether that movement be via wireless methods, fiber optics, traditional copper wire, telephony, computer network or emerging methods. Each industry segment & the most outstanding corporations within those industries are featured. It includes dozens of tables, indexes by product, services & geography, plus corporate rankings for sales, profits & research budgets. Complete profiles on Plunkett's InfoTech 500 Firms include companies in telecommunications, software, hardware, on-line services, information management, systems integration, outsourcing & more.

 This issue covers topics related to the removal of contaminants from and conditioning of Si (SOI), SiC, Ge, SiGe, and III-V semiconductor surfaces; cleaning media, including non-aqueous cleaning methods and tools; front- and back-end cleaning operations; integrated cleaning; cleaning of MEMS; photomasks (reticles); porous low-k dielectrics; post-CMP cleaning; wafer bevel cleaning and polishing; characterization, evaluation, and monitoring of cleaning; correlation with device performance as well as cleaning of equipment and storage and handling hardware. The hardcover edition includes a bonus CD-ROM of Cleaning Technology in Semiconductor Device Manufacturing 1989?2007: Proceedings from the ECS Semiconductor Cleaning Symposia 1?10. This bonus material is not available with the PDF edition.

This comprehensive volume provides an in-depth discussion of the fundamentals of cleaning and surface conditioning of semiconductor applications such as high-k/metal gate cleaning, copper/low-k cleaning, high dose implant stripping, and silicon and SiGe passivation. The theory and fundamental physics associated with wet etching and wet cleaning is reviewed, plus the surface and colloidal aspects of wet processing. Formulation development practices and methodology are presented along with the applications for preventing copper corrosion, cleaning aluminum lines, and other sensitive layers. This is a must-have reference for any engineer or manager associated with using or supplying cleaning and contamination free technologies for semiconductor manufacturing. From the Reviews... "This handbook will be a valuable resource for many academic libraries. Many engineering librarians who work with a variety of programs (including, but not limited to Materials Engineering) should include this work in their collection. My recommendation is to add this work to any collection that serves a campus with a materials/manufacturing/electrical/computer engineering programs and campuses with departments of physics and/or chemistry with large graduate-level enrollment." —Randy Wallace, Department Head, Discovery Park Library, University of North Texas
