"Students and teachers have long appreciated the scope of topics and examples, the research-based information, and the accessible writing style presented by these three trusted authorities in the field of adolescent literacy. This seventh edition includes up-to-date information to help teachers address the literacy needs of English learners in their classrooms and today's culturally diverse student population, while also addressing new frameworks for reading and writing instruction, including a sociocultural perspective on teaching and learning and insights from the New Literacies. As in previous editions, this seventh edition is based on the assumption that, rather than just a mere add-on, "content literacy is integral to every discipline and special subject area, to the teachable moments that make less stellar ones tolerable, and, most important, to each student's motivation and engagement with learning." The ideas the authors present are backed by research, tested in real classrooms, and designed to help teachers apply what is useful to their own particular disciplines. The ideas they share-both new and from "-- Publisher.

Mathematical Literacy, Grade 11 McGraw-Hill Education

This book provides a clear overview of current thinking on the teaching and learning of geography. It is an ideal companion to all students beginning a career in teaching the subject in secondary schools. The chapters are written by experienced teacher educators and bridge both theory and practice. The writers focus on the continuities, whilst setting them in the context of the changing curriculum. The book is divided into four parts. Part One examines the historical context of geography teaching. Part Two looks at issues of course planning, design, syllabuses and programmes of study. Underlying this section is the assumption that geography should not be considered in isolation from other subjects, but rather as part of a whole curriculum. Part Three concentrates on teaching and learning, and includes chapters on the use of maps, field work, IT and first hand experience within a community. The final section covers the issues associated with assessment, across the whole school age range.

It covers the basics of Earth surface forms and processes, while reflecting on the latest developments in the field. *Fundamentals of Geomorphology* begins with a consideration of the nature of geomorphology, process and form, history, and geomorphic systems, and moves on to discuss: structure: structural landforms associated with plate tectonics and those associated with volcanoes, impact craters, and folds, faults, and joints process and form: landforms resulting from, or influenced by, the exogenic agencies of weathering, running water, flowing ice and meltwater, ground ice and frost, the wind, and the sea; landforms developed on limestone; and landscape evolution, a discussion of ancient landforms, including palaeosurfaces, stagnant landscape features, and evolutionary aspects of landscape change.
